Editor's Introduction

Editor's Introduction.

OF the five complete productions of Emerson which appear in this volume, three ("History," "Self-Reliance," and "Spiritual Laws") are chosen from the first series of his "Essays," published in 1841. The essay on "Nature," reprinted here, was first published in the second series of "Essays" in 1844, and is not to be confused with the more enigmatic essay on "Nature," in eight brief "books," which appeared in 1836. The later essay is based, after a fashion, upon the first, but it is more winning in its method. These four representative papers are followed by the famous Phi Beta Kappa address of 1837 on "The American Scholar"; an oration which Lowell declared to be "an event without any parallel in our literary annals," and which Holmes characterized as "our intellectual Declaration of Independence."

Emerson was thirty-four when he delivered this address upon "The American Scholar." His literary productiveness continued unabated for about thirty years longer. After 1867 he produced little, though his calm life was prolonged until 1882, within a few days of his eightieth year. All the selections in this volume, it will be observed, are chosen

Editor's Introduction

from the period of his earlier manhood, when his thought had a morning freshness and his language was that of a new, delicious poetry. None of his later writings give a more perfect display of the essential qualities of his genius.

If Emerson passed logically and systematically from one subject to another, and during the elucidation of his themes kept strictly to the business in hand, it would be interesting to summarize the judgments of this acute and dispassionate mind upon such perennially significant topics as History, Self-Reliance, Nature, Spiritual Laws, and Scholarship. But Emerson smilingly avoided any sequential, formal treatment of his themes. To make an abstract of one of his essays is as difficult as it is unprofitable. He drifts serenely from cape to inlet, from island to promontory, surveying some new or old domain of thought and experience. The reports he brings back to us are "the words we wish to hear," but he is not bent, after all, upon making a topographical chart of sea and shore. Passages from his essay on "History" read like paragraphs belonging in "Self-Reliance" or "Nature." Indeed, we know that Emerson's essays were pieced together out of random entries in his notebooks, and it is idle to seek for a superficial unity for which the author himself never cared.

Editor's Introduction

It is enough that there is a fundamental unity in the great idealist's scheme of the world. Witness these sentences, chosen from each of the essays in this volume:

"Let it suffice that in the light of these two facts, namely, that the mind is One, and that Nature is its correlative, history is to be read and written."—"History.")

"Nothing can bring you peace but yourself. Nothing can bring you peace but the triumph of principles."—"Self-Reliance.")

"Let a man believe in God, and not in names and places and persons."—"Spiritual Laws.")

"The world is mind precipitated. . . . So poor is Nature with all her craft, that from the beginning to the end of the universe she has but one stuff,—but one stuff with its two ends, to serve up all her dream-like variety. Compound it how she will, star, sand, fire, water, tree, man, it is still one stuff, and betrays the same properties."—"Nature.")

"The ancient precept 'Know thyself,' and the modern precept 'Study nature,' become at last one maxim."—"The American Scholar.")

Emerson's claim to an enduring place among American men of letters is that he can say things like these, and say them so well. Yet most persons who have once come under the spell of that radiant and vivifying personality see in Emerson something other

Editor's Introduction

and rarer than a mere man of letters. To them he is a "friend and helper," a personal force. Some readers think they outgrow him, as the transcendental days of youth go by; but the wiser ones keep coming back to him to borrow something of his indefeasible optimism, his serene courage. This little volume will introduce him no doubt, to new readers. They are to be envied. But to the greater number of those who turn the pages of this book, it will serve as a reminder and pledge of an ennobling intellectual companionship. Not a few of them, re-reading these brave and beautiful essays written more than sixty years ago, will murmur to themselves those words of Emerson's master which sprang to the lips of Faust:

*Die Geisterwelt ist nicht verschlossen;
Dein Sinn ist zu, dein Herz ist todt!
Auf! bade, Schüler, unverdrossen,
Die ird'sche Brust im Morgenroth!"*

BLISS PERRY.

History

HISTORY.

THERE is one mind common to all individual men. Every man is an inlet to the same and to all of the same. He that is once admitted to the right of reason is made a freeman of the whole estate. What Plato has thought, he may think; what a saint has felt, he may feel; what at any time has befallen any man, he can understand. Who hath access to this universal mind is a party to all that is or can be done, for this is the only and sovereign agent.

Of the works of this mind history is the record. Its genius is illustrated by the entire series of days. Man is explicable by nothing less than all his history. Without hurry, without rest, the human spirit goes forth from the beginning to embody every faculty, every thought, every emotion which belongs to it, in appropriate events. But the thought is always prior to the fact; all the facts of history preëxist in the mind as laws. Each law in turn is made by circumstances predominant, and the limits of nature give power to but one at a time. A man is the whole encyclopædia of facts. The creation of a thousand forests is in one acorn, and Egypt, Greece, Rome, Gaul, Britain, America,

Emerson

lie folded already in the first man. Epoch after epoch, camp, kingdom, empire, republic, democracy, are merely the application of his manifold spirit to the manifold world.

This human mind wrote history, and this must read it. The Sphinx must solve her own riddle. If the whole of history is in one man, it is all to be explained from individual experience. There is a relation between the hours of our life and the centuries of time. As the air I breathe is drawn from the great repositories of nature, as the light on my book is yielded by a star a hundred millions of miles distant, as the poise of my body depends on the equilibrium of centrifugal and centripetal forces, so the hours should be instructed by the ages and the ages explained by the hours. Of the universal mind each individual man is one more incarnation. All its properties consist in him. Each new fact in his private experience flashes a light on what great bodies of men have done, and the crises of his life refer to national crises. Every revolution was first a thought in one man's mind, and when the same thought occurs to another man, it is the key to that era. Every reform was once a private opinion, and when it shall be a private opinion again it will solve the problem of the age. The fact narrated must correspond to something in me to be credible or intelligible. We, as we read, must become Greeks, Romans,

History

Turks, priest and king, martyr and executioner; must fasten these images to some reality in our secret experience, or we shall learn nothing rightly. What befell Asdrubal or Cæsar Borgia is as much an illustration of the mind's powers and depravations as what has befallen us. Each new law and political movement has meaning for you. Stand before each of its tablets and say, 'Under this mask did my Proteus nature hide itself.' This remedies the defect of our too great nearness to ourselves. This throws our actions into perspective; and as crabs, goats, scorpions, the balance and the water-pot lose their meanness when hung as signs in the zodiac, so I can see my own vices without heat in the distant persons of Solomon, Alcibiades, and Catiline.

It is the universal nature which gives worth to particular men and things. Human life, as containing this, is mysterious and inviolable, and we hedge it round with penalties and laws. All laws derive hence their ultimate reason; all express more or less distinctly some command of this supreme illimitable essence. Property also holds of the soul, covers great spiritual facts, and instinctively we at first hold to it with swords and laws and wide and complex combinations. The obscure consciousness of this fact is the light of all our day, the claim of claims; the plea for education, for justice, for

Emerson

charity; the foundation of friendship and love and of the heroism and grandeur which belong to acts of self-reliance. It is remarkable that involuntarily we always read as superior beings. Universal history, the poets, the romancers, do not in their stateliest pictures,—in the sacerdotal, the imperial palaces, in the triumphs of will or of genius,—anywhere lose our ear, anywhere make us feel that we intrude, that this is for better men; but rather is it true that in their grandest strokes we feel most at home. All that Shakspeare says of the king, yonder slip of a boy that reads in the corner feels to be true of himself. We sympathize in the great moments of history, in the great discoveries, the great resistances, the great prosperities of men;—because there law was enacted, the sea was searched, the land was found, or the blow was struck, *for us*, as we ourselves in that place would have done or applauded.

We have the same interest in condition and character. We honor the rich because they have externally the freedom, power, and grace which we feel to be proper to man, proper to us. So all that is said of the wise man by Stoic or Oriental or modern essayist, describes to each reader his own idea, describes his unattained but attainable self. All literature writes the character of the wise man. Books, monuments, pictures, conversation, are portraits in which he finds the

History

lineaments he is forming. The silent and the eloquent praise him and accost him, and he is stimulated wherever he moves, as by personal allusions. A true aspirant therefore never needs look for allusions personal and laudatory in discourse. He hears the commendation, not of himself, but, more sweet, of that character he seeks, in every word that is said concerning character, yea further in every fact and circumstance,—in the running river and the rustling corn. Praise is looked, homage tendered, love flows, from mute nature, from the mountains and the lights of the firmament.

These hints, dropped as it were from sleep and night, let us use in broad day. The student is to read history actively and not passively; to esteem his own life the text, and books the commentary. Thus compelled, the Muse of history will utter oracles, as never to those who do not respect themselves. I have no expectation that any man will read history aright who thinks that what was done in a remote age, by men whose names have resounded far, has any deeper sense than what he is doing to-day.

The world exists for the education of each man. There is no age or state of society or mode of action in history to which there is not somewhat corresponding in his life. Every thing tends in a wonderful manner to abbreviate itself and yield its own virtue to

Emerson

him. He should see that he can live all history in his own person. He must sit solidly at home, and not suffer himself to be bullied by kings or empires, but know that he is greater than all the geography and all the government of the world; he must transfer the point of view from which history is commonly read, from Rome and Athens and London, to himself, and not deny his conviction that he is the court, and if England or Egypt have any thing to say to him he will try the case; if not, let them forever be silent. He must attain and maintain that lofty sight where facts yield their secret sense, and poetry and annals are alike. The instinct of the mind, the purpose of nature, betrays itself in the use we make of the signal narrations of history. Time dissipates to shining ether the solid angularity of facts. No anchor, no cable, no fences avail to keep a fact a fact. Babylon, Troy, Tyre, Palestine, and even early Rome are passing already into fiction. The Garden of Eden, the sun standing still in Gideon, is poetry thenceforward to all nations. Who cares what the fact was, when we have made a constellation of it to hang in heaven an immortal sign? London and Paris and New York must go the same way. "What is history," said Napoleon, "but a fable agreed upon?" This life of ours is stuck round with Egypt, Greece, Gaul, England, War, Colonization,

History

Church, Court and Commerce, as with so many flowers and wild ornaments grave and gay. I will not make more account of them. I believe in Eternity. I can find Greece, Asia, Italy, Spain, and the Islands,—the genius and creative principle of each and of all eras, in my own mind.

We are always coming up with the emphatic facts of history in our private experience and verifying them here. All history becomes subjective; in other words there is properly no history, only biography. Every mind must know the whole lesson for itself,—must go over the whole ground. What it does not see, what it does not live, it will not know. What the former age has epitomized into a formula or rule for manipular convenience, it will lose all the good of verifying for itself, by means of the wall of that rule. Somewhere, sometime, it will demand and find compensation for that loss, by doing the work itself. Ferguson discovered many things in astronomy which had long been known. The better for him.

History must be this or it is nothing. Every law which the state enacts indicates a fact in human nature; that is all. We must in ourselves see the necessary reason of every fact,—see how it could and must be. So stand before every public and private work; before an oration of Burke, before a victory of Napoleon, before a martyrdom of Sir

Emerson

Thomas More, of Sidney, of Marmaduke Robinson; before a French Reign of Terror, and a Salem hanging of witches; before a fanatic revival and the Animal Magnetism in Paris, or in Providence. We assume that we under like influence should be alike affected, and should achieve the like; and we aim to master intellectually the steps and reach the same height or the same degradation that our fellow, our proxy has done.

All inquiry into antiquity, all curiosity respecting the Pyramids, the excavated cities, Stonehenge, the Ohio Circles, Mexico, Memphis,—is the desire to do away this wild, savage, and preposterous There or Then, and introduce in its place the Here and the Now. Belzoni digs and measures in the mummy-pits and pyramids of Thebes until he can see the end of the difference between the monstrous work and himself. When he has satisfied himself, in general and in detail, that it was made by such a person as he, so armed and so motivated, and to ends to which he himself should also have worked, the problem is solved; his thought lives along the whole line of temples and sphinxes and catacombs, passes through them all with satisfaction, and they live again to the mind, or are *now*.

A Gothic cathedral affirms that it was done by us and not done by us. Surely it was by man, but we find it not in our man. But

History

we apply ourselves to the history of its production. We put ourselves into the place and state of the builder. We remember the forest-dwellers, the first temples, the adherence to the first type, and the decoration of it as the wealth of the nation increased; the value which is given to wood by carving led to the carving over the whole mountain of stone of a cathedral. When we have gone through this process, and added thereto the Catholic Church, its cross, its music, its processions, its Saints' days and image-worship, we have as it were been the man that made the minister; we have seen how it could and must be. We have the sufficient reason.

The difference between men is in their principle of association. Some men classify objects by color and size and other accidents of appearance; others by intrinsic likeness, or by the relation of cause and effect. The progress of the intellect is to the clearer vision of causes, which neglects surface differences. To the poet, to the philosopher, to the saint, all things are friendly and sacred, all events profitable, all days holy, all men divine. For the eye is fastened on the life, and slights the circumstance. Every chemical substance, every plant, every animal in its growth, teaches the unity of cause, the variety of appearance.

Upborne and surrounded as we are by this all-creating nature, soft and fluid as a cloud

Emerson

or the air, why should we be such hard pedants, and magnify a few forms? Why should we make account of time, or of magnitude, or of figure? The soul knows them not, and genius, obeying its law, knows how to play with them as a young child plays with gray-beards and in churches. Genius studies the causal thought, and far back in the womb of things sees the rays parting from one orb, that diverge, ere they fall, by infinite diameters. Genius watches the monad through all his masks as he performs the metempsychosis of nature. Genius detects through the fly, through the caterpillar, through the grub, through the egg, the constant individual; through countless individuals the fixed species; through many species the genus; through all genera the steadfast type; through all the kingdoms of organized life the eternal unity. Nature is a mutable cloud which is always and never the same. She casts the same thought into troops of forms, as a poet makes twenty fables with one moral. Through the brutality and toughness of matter, a subtle spirit bends all things to its own will. The adamant streams into soft but precise form before it, and whilst I look at it its outline and texture are changed again. Nothing is so fleeting as form; yet never does it quite deny itself. In man we still trace the remains or hints of all that we esteem badges of servi-

History

tude in the lower races; yet in him they enhance his nobleness and grace; as Io, in Æschylus, transformed to a cow, offends the imagination; but how changed when as Isis in Egypt she meets Osiris-Jove, a beautiful woman with nothing of the metamorphosis left but the lunar horns as the splendid ornament of her brows!

The identity of history is equally intrinsic, the diversity equally obvious. There is, at the surface, infinite variety of things; at the centre there is simplicity of cause. How many are the acts of one man in which we recognize the same character! Observe the sources of our information in respect to the Greek Genius. We have the civil history of that people, as Herodotus, Thucydides, Xenophon, and Plutarch have given it; a very sufficient account of what manner of persons they were and what they did. We have the same national mind expressed for us again in their *literature*, in epic and lyric poems, drama, and philosophy; a very complete form. Then we have it once more in their architecture, a beauty as of temperance itself, limited to the straight line and the square,—a builded geometry. Then we have it once again in *sculpture*, the “tongue on the balance of expression,” a multitude of forms in the utmost freedom of action and never transgressing the ideal serenity; like votaries performing some religious dance before the

Emerson

gods, and, though in convulsive pain or mortal combat, never daring to break the figure and decorum of their dance. Thus of the genius of one remarkable people we have a fourfold representation: and to the senses what more unlike than an ode of Pindar, a marble centaur, the peristyle of the Parthenon, and the last actions of Phocion?

Every one must have observed faces and forms which, without any resembling feature, make a like impression on the beholder. A particular picture or copy of verses, if it do not awaken the same train of images, will yet superinduce the same sentiment as some wild mountain walk, although the resemblance is nowise obvious to the senses, but is occult and out of the reach of the understanding. Nature is an endless combination and repetition of a very few laws. She hums the old well-known air through innumerable variations.

Nature is full of a sublime family likeness throughout her works, and delights in startling us with resemblances in the most unexpected quarters. I have seen the head of an old sachem of the forest which at once reminded the eye of a bald mountain summit, and the furrows of the brow suggested the strata of the rock. There are men whose manners have the same essential splendor as the simple and awful sculpture on the friezes of the Parthenon and the remains of the

History

earliest Greek art. And there are compositions of the same strain to be found in the books of all ages. What is Guido's *Rospigliosi Aurora* but a morning thought, as the horses in it are only a morning cloud? If any one will but take pains to observe the variety of actions to which he is equally inclined in certain moods of mind, and those to which he is averse, he will see how deep is the chain of affinity.

A painter told me that nobody could draw a tree without in some sort becoming a tree; or draw a child by studying the outlines of its form merely,—but, by watching for a time his motions and plays, the painter enters into his nature and can then draw him at will in every attitude. So Roos “entered into the inmost nature of a sheep.” I knew a draughtsman employed in a public survey who found that he could not sketch the rocks until their geological structure was first explained to him. In a certain state of thought is the common origin of very diverse works. It is the spirit and not the fact that is identical. By a deeper apprehension, and not primarily by a painful acquisition of many manual skills, the artist attains the power of awakening other souls to a given activity.

It has been said that “common souls pay with what they do, nobler souls with that which they are.” And why? Because a pro-

Emerson

found nature awakens in us by its actions and words, by its very looks and manners, the same power and beauty that a gallery of sculpture or of pictures addresses.

Civil and natural history, the history of art and of literature, must be explained from individual history, or must remain words. There is nothing but is related to us, nothing that does not interest us,—kingdom, college, tree, horse, or iron shoe,—the roots of all things are in man. Santa Croce and the Dome of St. Peter's are lame copies after a divine model. Strasburg Cathedral is a material counterpart of the soul of Erwin of Steinbach. The true poem is the poet's mind; the true ship is the ship-builder. In the man, could we lay him open, we should see the reason for the last flourish and tendril of his work; as every spine and tint in the sea-shell preëxist in the secreting organs of the fish. The whole of heraldry and of chivalry is in courtesy. A man of fine manners shall pronounce your name with all the ornament that titles of nobility could ever add.

The trivial experience of every day is always verifying some old prediction to us and converting into things the words and signs which we had heard and seen without heed. A lady with whom I was riding in the forest said to me that the woods always seemed to her *to wait*, as if the genii who inhabit them

History

suspended their deeds until the wayfarer had passed onward; a thought which poetry has celebrated in the dance of the fairies, which breaks off on the approach of human feet. The man who has seen the rising moon break out of the clouds at midnight, has been present like an archangel at the creation of light and of the world. I remember one summer day in the fields my companion pointed out to me a broad cloud, which might extend a quarter of a mile parallel to the horizon, quite accurately in the form of a cherub as painted over churches,—a round block in the centre, which it was easy to animate with eyes and mouth, supported on either side by wide-stretched symmetrical wings. What appears once in the atmosphere may appear often, and it was undoubtedly the archetype of that familiar ornament. I have seen in the sky a chain of summer lightning which at once showed to me that the Greeks drew from nature when they painted the thunderbolt in the hand of Jove. I have seen a snow-drift along the sides of the stone wall which obviously gave the idea of the common architectural scroll to abut a tower.

By surrounding ourselves with the original circumstances we invent anew the orders and the ornaments of architecture, as we see how each people merely decorated its primitive abodes. The Doric temple preserves the sem-

Emerson

blance of the wooden cabin in which the Dorian dwelt. The Chinese pagoda is plainly a Tartar tent. The Indian and Egyptian temples still betray the mounds and subterranean houses of their forefathers. "The custom of making houses and tombs in the living rock," says Heeren in his *Researches on the Ethiopians*, "determined very naturally the principal character of the Nubian Egyptian architecture to the colossal form which it assumed. In these caverns, already prepared by nature, the eye was accustomed to dwell on huge shapes and masses, so that when art came to the assistance of nature it could not move on a small scale without degrading itself. What would statues of the usual size, or neat porches and wings have been, associated with those gigantic halls before which only Colossi could sit as watchmen or lean on the pillars of the interior?"

The Gothic church plainly originated in a rude adaptation of the forest trees, with all their boughs, to a festal or solemn arcade; as the bands about the cleft pillars still indicate the green withes that tied them. No one can walk in a road cut through pine woods, without being struck with the architectural appearance of the grove, especially in winter, when the barrenness of all other trees shows the low arch of the Saxons. In the woods in a winter afternoon one will see as readily the origin of the stained glass win-

History

dow, with which the Gothic cathedrals are adorned, in the colors of the western sky seen through the bare and crossing branches of the forest. Nor can any lover of nature enter the old piles of Oxford and the English cathedrals, without feeling that the forest overpowered the mind of the builder, and that his chisel, his saw and plane still reproduced its ferns, its spikes of flowers, its locust, elm, oak, pine, fir and spruce.

The Gothic cathedral is a blossoming in stone subdued by the insatiable demand of harmony in man. The mountain of granite blooms into an eternal flower, with the lightness and delicate finish as well as the aerial proportions and perspective of vegetable beauty.

In like manner all public facts are to be individualized, all private facts are to be generalized. Then at once History becomes fluid and true, and Biography deep and sublime. As the Persian imitated in the slender shafts and capitals of his architecture the stem and flower of the lotus and palm, so the Persian court in its magnificent era never gave over the nomadism of its barbarous tribes, but travelled from Ecbatana, where the spring was spent, to Susa in summer and to Babylon for the winter.

In the early history of Asia and Africa, Nomadism and Agriculture are the two antagonist facts. The geography of Asia and

Emerson

of Africa necessitated a nomadic life. But the nomads were the terror of all those whom the soil or the advantages of a market had induced to build towns. Agriculture therefore was a religious injunction, because of the perils of the state from nomadism. And in these late and civil countries of England and America these propensities still fight out the old battle, in the nation and in the individual. The nomads of Africa were constrained to wander, by the attacks of the gad-fly, which drives the cattle mad, and so compels the tribe to emigrate in the rainy season and to drive off the cattle to the higher sandy regions. The nomads of Asia follow the pasturage from month to month. In America and Europe the nomadism is of trade and curiosity; a progress, certainly, from the gad-fly of Astaboras to the Anglo and Italo-mania of Boston Bay. Sacred cities, to which a periodical religious pilgrimage was enjoined, or stringent laws and customs tending to invigorate the national bond, were the check on the old rovers; and the cumulative values of long residence are the restraints on the itinerancy of the present day. The antagonism of the two tendencies is not less active in individuals, as the love of adventure or the love of repose happens to predominate. A man of rude health and flowing spirits has the faculty of rapid domestication, lives in his wagon and roams

History

through all latitudes as easily as a Calmuc. At sea, or in the forest, or in the snow, he sleeps as warm, dines with as good appetite, and associates as happily as beside his own chimneys. Or perhaps his facility is deeper seated, in the increased range of his faculties of observation, which yield him points of interest wherever fresh objects meet his eyes. The pastoral nations were needy and hungry to desperation; and this intellectual nomadism, in its excess, bankrupts the mind through the dissipation of power on a miscellany of objects. The home-keeping wit, on the other hand, is that continence or content which finds all the elements of life in its own soil; and which has its own perils of monotony and deterioration, if not stimulated by foreign infusions.

Every thing the individual sees without him corresponds to his states of mind, and every thing is in turn intelligible to him, as his onward thinking leads him into the truth to which that fact or series belongs.

The primeval world,—the Fore-World, as the Germans say,—I can dive to it in myself as well as grope for it with researching fingers in catacombs, libraries, and the broken reliefs and torsos of ruined villas.

What is the foundation of that interest all men feel in Greek history, letters, art and poetry, in all its periods from the Heroic or Homeric age down to the domestic life of the

Emerson

Athenians and Spartans, four or five centuries later? What but this, that every man passes personally through a Grecian period. The Grecian state is the era of the bodily nature, the perfection of the senses,—of the spiritual nature unfolded in strict unity with the body. In it existed those human forms which supplied the sculptor with his models of Hercules, Phœbus, and Jove; not like the forms abounding in the streets of modern cities, wherein the face is a confused blur of features, but composed of incorrupt, sharply defined and symmetrical features, whose eye-sockets are so formed that it would be impossible for such eyes to squint and take furtive glances on this side and on that, but they must turn the whole head. The manners of that period are plain and fierce. The reverence exhibited is for personal qualities; courage, address, self-command, justice, strength, swiftness, a loud voice, a broad chest. Luxury and elegance are not known. A sparse population and want make every man his own valet, cook, butcher and soldier, and the habit of supplying his own needs educates the body to wonderful performances. Such are the Agamemnon and Diomed of Homer, and not far different is the picture Xenophon gives of himself and his compatriots in the Retreat of the Ten Thousand. "After the army had crossed the river Teleboas in Armenia, there fell much snow,

History

and the troops lay miserably on the ground covered with it. But Xenophon arose naked, and taking an axe, began to split wood; whereupon others rose and did the like." Throughout his army exists a boundless liberty of speech. They quarrel for plunder, they wrangle with the generals on each new order, and Xenophon is as sharp-tongued as any and sharper-tongued than most, and so gives as good as he gets. Who does not see that this is a gang of great boys, with such a code of honor and such lax discipline as great boys have?

The costly charm of the ancient tragedy, and indeed of all the old literature, is that the persons speak simply,—speak as persons who have great good sense without knowing it, before yet the reflective habit has become the predominant habit of the mind. Our admiration of the antique is not admiration of the old, but of the natural. The Greeks are not reflective, but perfect in their senses and in their health, with the finest physical organization in the world. Adults acted with the simplicity and grace of children. They made vases, tragedies and statues, such as healthy senses should,—that is, in good taste. Such things have continued to be made in all ages, and are now, wherever a healthy physique exists; but, as a class, from their superior organization, they have surpassed all. They combine the energy of

Emerson

manhood with the engaging unconsciousness of childhood. The attraction of these manners is that they belong to man, and are known to every man in virtue of his being once a child; besides that there are always individuals who retain these characteristics. A person of childlike genius and inborn energy is still a Greek, and revives our love of the Muse of Hellas. I admire the love of nature in the Philoctetes. In reading those fine apostrophes to sleep, to the stars, rocks, mountains and waves, I feel time passing away as an ebbing sea. I feel the eternity of man, the identity of his thought. The Greek had it seems the same fellow-beings as I. The sun and moon, water and fire, met his heart precisely as they meet mine. Then the vaunted distinction between Greek and English, between Classic and Romantic schools, seems superficial and pedantic. When a thought of Plato becomes a thought to me, —when a truth that fired the soul of Pindar fires mine, time is no more. When I feel that we two meet in a perception, that our two souls are tinged with the same hue, and do as it were run into one, why should I measure degrees of latitude, why should I count Egyptian years?

The student interprets the age of chivalry by his own age of chivalry, and the days of maritime adventure and circumnavigation by quite parallel miniature experiences of his

History

own. To the sacred history of the world he has the same key. When the voice of a prophet out of the deeps of antiquity merely echoes to him a sentiment of his infancy, a prayer of his youth, he then pierces to the truth through all the confusion of tradition and the caricature of institutions.

Rare, extravagant spirits come by us at intervals, who disclose to us new facts in nature. I see that men of God have from time to time walked among men and made their commission felt in the heart and soul of the commonest hearer. Hence evidently the tripod, the priest, the priestess inspired by the divine afflatus.

Jesus astonishes and overpowers sensual people. They cannot unite him to history, or reconcile him with themselves. As they come to revere their intuitions and aspire to live holily, their own piety explains every fact, every word.

How easily these old worships of Moses, of Zoroaster, of Menu, of Socrates, domesticate themselves in the mind. I cannot find any antiquity in them. They are mine as much as theirs.

I have seen the first monks and anchorets, without crossing seas or centuries. More than once some individual has appeared to me with such negligence of labor and such commanding contemplation, a haughty beneficiary begging in the name of God, as made

Emerson

good to the nineteenth century Simeon the Stylite, the Thebais, and the first Capuchins.

The priestcraft of the East and West, of the Magian, Brahmin, Druid, and Inca, is expounded in the individual's private life. The cramping influence of a hard formalist on a young child, in repressing his spirits and courage, paralyzing the understanding, and that without producing indignation, but only fear and obedience, and even much sympathy with the tyranny,—is a familiar fact, explained to the child when he becomes a man, only by seeing that the oppressor of his youth is himself a child tyrannized over by those names and words and forms of whose influence he was merely the organ to the youth. The fact teaches him how Belus was worshipped and how the Pyramids were built, better than the discovery by Champollion of the names of all the workmen and the cost of every tile. He finds Assyria and the Mounds of Cholula at his door, and himself has laid the courses.

Again, in that protest which each considerate person makes against the superstition of his times, he repeats step for step the part of old reformers, and in the search after truth finds, like them, new perils to virtue. He learns again what moral vigor is needed to supply the girdle of a superstition. A great licentiousness treads on the heels of a reformation. How many times in the his-

History

tory of the world has the Luther of the day had to lament the decay of piety in his own household! "Doctor," said his wife to Martin Luther, one day, "how is it that whilst subject to papacy we prayed so often and with such fervor, whilst now we pray with the utmost coldness and very seldom?"

The advancing man discovers how deep a property he has in literature,—in all fable as well as in all history. He finds that the poet was no odd fellow who described strange and impossible situations, but that universal man wrote by his pen a confession true for one and true for all. His own secret biography he finds in lines wonderfully intelligible to him, dotted down before he was born. One after another he comes up in his private adventures with every fable of Æsop, of Homer, of Hafiz, of Ariosto, of Chaucer, of Scott, and verifies them with his own head and hands.

The beautiful fables of the Greeks, being proper creations of the imagination and not of the fancy, are universal verities. What a range of meanings and what perpetual pertinence has the story of Prometheus! Beside its primary value as the first chapter of the history of Europe, (the mythology thinly veiling authentic facts, the invention of the mechanic arts and the migration of colonies,) it gives the history of religion, with some closeness to the faith of later ages. Prome-

Emerson

theus is the Jesus of the old mythology. He is the friend of man; stands between the unjust "justice" of the Eternal Father and the race of mortals, and readily suffers all things on their account. But where it departs from the Calvinistic Christianity and exhibits him as the defier of Jove, it represents a state of mind which readily appears wherever the doctrine of Theism is taught in a crude, objective form, and which seems the self-defence of man against this untruth, namely a discontent with the believed fact that a God exists, and a feeling that the obligation of reverence is onerous. It would steal if it could the fire of the Creator, and live apart from him and independent of him. The Prometheus Vincit is the romance of skepticism. Not less true to all time are the details of that stately apologue. Apollo kept the flocks of Admetus, said the poets. When the gods come among men, they are not known. Jesus was not; Socrates and Shakspeare were not. Antæus was suffocated by the gripe of Hercules, but every time he touched his mother earth his strength was renewed. Man is the broken giant, and in all his weakness both his body and his mind are invigorated by habits of conversation with nature. The power of music, the power of poetry, to unfix and as it were clap wings to solid nature, interprets the riddle of Orpheus. The philosophical perception of identity

History

through endless mutations of form makes him know the Proteus. What else am I who laughed or wept yesterday, who slept last night like a corpse, and this morning stood and ran? And what see I on any side but the transmigrations of Proteus? I can symbolize my thought by using the name of any creature, of any fact, because every creature is man agent, or patient. Tantalus is but a name for you and me. Tantalus means the impossibility of drinking the waters of thought which are always gleaming and waving within sight of the soul. The transmigration of souls is no fable. I would it were; but men and women are only half human. Every animal of the barn-yard, the field and the forest, of the earth and of the waters that are under the earth, has contrived to get a footing and to leave the print of its features and form in some one or other of these upright, heaven-facing speakers. Ah! brother, stop the ebb of thy soul,—ebbing downward into the forms into whose habits thou hast now for many years slid. As near and proper to us is also that old fable of the Sphinx, who was said to sit in the road-side and put riddles to every passenger. If the man could not answer, she swallowed him alive. If he could solve the riddle, the Sphinx was slain. What is our life but an endless flight of winged facts or events? In splendid variety these changes

Emerson

come, all putting questions to the human spirit. Those men who cannot answer by a superior wisdom these facts or questions of time, serve them. Facts encumber them, tyrannize over them, and make the men of routine, the men of *sense*, in whom a literal obedience to facts has extinguished every spark of that light by which man is truly man. But if the man is true to his better instincts or sentiments, and refuses the dominion of facts, as one that comes of a higher race; remains fast by the soul and sees the principle, then the facts fall aptly and supple into their places; they know their master, and the meanest of them glorifies him.

See in Goethe's *Helena* the same desire that every word should be a thing. These figures, he would say, these Chirons, Griffins, Phor-kyas, Helen and Leda, are somewhat, and do exert a specific influence on the mind. So far then are they eternal entities, as real to-day as in the first Olympiad. Much revolving them he writes out freely his humor, and gives them body to his own imagination. And although that poem be as vague and fantastic as a dream, yet is it much more attractive than the more regular dramatic pieces of the same author, for the reason that it operates a wonderful relief to the mind from the routine of customary images,—awakens the reader's invention and fancy

History

by the wild freedom of the design, and by the unceasing succession of brisk shocks of surprise.

The universal nature, too strong for the petty nature of the bard, sits on his neck and writes through his hand; so that when he seems to vent a mere caprice and wild romance, the issue is an exact allegory. Hence Plato said that "poets utter great and wise things which they do not themselves understand." All the fictions of the Middle Age explain themselves as a masked or frolic expression of that which in grave earnest the mind of that period toiled to achieve. Magic and all that is ascribed to it is a deep presentiment of the powers of science. The shoes of swiftness, the sword of sharpness, the power of subduing the elements, of using the secret virtues of minerals, of understanding the voices of birds, are the obscure efforts of the mind in a right direction. The preternatural prowess of the hero, the gift of perpetual youth, and the like, are alike the endeavor of the human spirit "to bend the shows of things to the desires of the mind."

In Perceforest and Amadis de Gaul a garland and a rose bloom on the head of her who is faithful, and fade on the brow of the inconstant. In the story of the Boy and the Mantle even a mature reader may be surprised with a glow of virtuous pleasure at the triumph of the gentle Genelas; and in-

Emerson

deed all the postulates of elfin annals,—that the fairies do not like to be named; that their gifts are capricious and not to be trusted; that who seeks a treasure must not speak; and the like,—I find true in Concord, however they might be in Cornwall or Bretagne.

Is it otherwise in the newest romance? I read the *Bride of Lammermoor*. Sir William Ashton is a mask for a vulgar temptation, Ravenswood Castle a fine name for proud poverty, and the foreign mission of state only a Bunyan disguise for honest industry. We may all shoot a wild bull that would toss the good and beautiful, by fighting down the unjust and sensual. Lucy Ashton is another name for fidelity, which is always beautiful and always liable to calamity in this world.

But along with the civil and metaphysical history of man, another history goes daily forward,—that of the external world,—in which he is not less strictly implicated. He is the compend of time; he is also the correlative of nature. His power consists in the multitude of his affinities, in the fact that his life is intertwined with the whole chain of organic and inorganic being. In old Rome the public roads beginning at the Forum proceeded north, south, east, west, to the centre of every province of the empire, making each market-town of Persia, Spain and

History

Britain pervious to the soldiers of the capital: so out of the human heart go as it were highways to the heart of every object in nature, to reduce it under the dominion of man. A man is a bundle of relations, a knot of roots, whose flower and fruitage is the world. His faculties refer to natures out of him and predict the world he is to inhabit, as the fins of the fish foreshow that water exists, or the wings of an eagle in the egg presuppose air. He cannot live without a world. Put Napoleon in an island prison, let his faculties find no men to act on, no Alps to climb, no stake to play for, and he would beat the air, and appear stupid. Transport him to large countries, dense population, complex interests and antagonist power, and you shall see that the man Napoleon, bounded that is by such a profile and outline, is not the virtual Napoleon. This is but Talbot's shadow;—

“His substance is not here.

For what you see is but the smallest part

And least proportion of humanity;

But were the whole frame here,

It is of such a spacious, lofty pitch,

Your roof were not sufficient to contain it.”

Henry VI.

Columbus needs a planet to shape his course upon. Newton and Laplace need myriads of age and thick-strewn celestial areas. One may say a gravitating solar

Emerson

system is already prophesied in the nature of Newton's mind. Not less does the brain of Davy or of Gay-Lussac, from childhood exploring the affinities and repulsions of particles, anticipate the laws of organization. Does not the eye of the human embryo predict the light? the ear of Handel predict the witchcraft of harmonic sound? Do not the constructive fingers of Watt, Fulton, Whittemore, Arkwright, predict the fusible, hard, and temperable texture of metals, the properties of stone, water, and wood? Do not the lovely attributes of the maiden child predict the refinements and decorations of civil society? Here also we are reminded of the action of man on man. A mind might ponder its thoughts for ages and not gain so much self-knowledge as the passion of love shall teach it in a day. Who knows himself before he has been thrilled with indignation at an outrage, or has heard an eloquent tongue, or has shared the throb of thousands in a national exultation or alarm? No man can antedate his experience, or guess what faculty or feeling a new object shall unlock, any more than he can draw to-day the face of a person whom he shall see to-morrow for the first time.

I will not now go behind the general statement to explore the reason of this correspondency. Let it suffice that in the light of these two facts, namely, that the mind is

History

One, and that nature is its correlative, history is to be read and written.

Thus in all ways does the soul concentrate and reproduce its treasures for each pupil. He too shall pass through the whole cycle of experience. He shall collect into a focus the rays of nature. History no longer shall be a dull book. It shall walk incarnate in every just and wise man. You shall not tell me by languages and titles a catalogue of the volumes you have read. You shall make me feel what periods you have lived. A man shall be the Temple of Fame. He shall walk, as the poets have described that goddess, in a robe painted all over with wonderful events and experiences;—his own form and features by their exalted intelligence shall be that variegated vest. I shall find in him the Foreworld; in his childhood the Age of Gold, the Apples of Knowledge, the Argonautic Expedition, the calling of Abraham, the building of the Temple, the Advent of Christ, Dark Ages, the Revival of Letters, the Reformation, the discovery of new lands, the opening of new sciences and new regions in man. He shall be the priest of Pan, and bring with him into humble cottages the blessing of the morning stars, and all the recorded benefits of heaven and earth.

Is there somewhat overweening in this claim? Then I reject all I have written, for what is the use of pretending to know what

Emerson

we know not? But it is the fault of our rhetoric that we cannot strongly state one fact without seeming to belie some other. I hols our actual knowledge very cheap. Hear the rats in the wall, see the lizard on the fence, the fungus under foot, the lichen on the log. What do I know sympathetically, morally, of either of these worlds of life? As old as the Caucasian man,—perhaps older,—these creatures have kept their counsel beside him, and there is no record of any word or sign that has passed from one to the other. What connection do the books show between the fifty or sixty chemical elements and the historical eras? Nay, what does history yet record of the metaphysical annals of man? What light does it shed on those mysteries which we hide under the names Death and Immortality? Yet every history should be written in a wisdom which divined the range of our affinities and looked at facts as symbols. I am ashamed to see what a shallow village tale our so-called History is. How many times we must say Rome, and Paris, and Constantinople! What does Rome know of rat and lizard? What are Olympiads and Consulates to these neighboring systems of beings? Nay, what food or experience or succor have they for the Esquimaux seal-hunter, for the Kanàka in his canoe, for the fisherman, the stevedore, the porter?

History

Broader and deeper we must write our annals,—from an ethical reformation, from an influx of the ever new, ever sanative conscience,—if we would trulier express our central and wide-related nature, instead of this old chronology of selfishness and pride to which we have too long lent our eyes. Already that day exists for us, shines in on us at unawares, but the path of science and of letters is not the way into nature. The idiot, the Indian, the child and unschooled farmer's boy stand nearer to the light by which nature is to be read, than the dissector or the antiquary.

Self-Reliance

SELF-RELIANCE.

I READ the other day some verses written by an eminent painter which were original and not conventional. The soul always hears an admonition in such lines, let the subject be what it may. The sentiment they instil is of more value than any thought they may contain. To believe your own thought, to believe that what is true for you in your private heart is true for all men,—that is genius. Speak your latent conviction, and it shall be the universal sense; for the utmost in due time becomes the outmost, and our first thought is rendered back to us by the trumpets of the Last Judgment. Familiar as the voice of the mind is to each, the highest merit we ascribe to Moses, Plato and Milton is that they set at naught books and traditions, and spoke not what men, but what *they* thought. A man should learn to detect and watch that gleam of light which flashes across his mind from within, more than the lustre of the firmament of bards and sages. Yet he dismisses without notice his thought, because it is his. In every work of genius we recognize our own rejected thoughts; they come back

Emerson

to us with a certain alienated majesty. Great works of art have no more affecting lesson for us than this. They teach us to abide by our spontaneous impression with good-humored inflexibility then most when the whole cry of voices is on the other side. Else to-morrow a stranger will say with masterly good sense precisely what we have thought and felt all the time, and we shall be forced to take with shame our own opinion from another.

There is a time in every man's education when he arrives at the conviction that envy is ignorance; that imitation is suicide; that he must take himself for better for worse as his portion; that though the wide universe is full of good, no kernel of nourishing corn can come to him but through his toil bestowed on that plot of ground which is given to him to till. The power which resides in him is new in nature, and none but he knows what that is which he can do, nor does he know until he has tried. Not for nothing one face, one character, one fact, makes much impression on him, and another none. The sculpture in the memory is not without preëstablished harmony. The eye was placed where one ray should fall, that it might testify of that particular ray. We but half express ourselves, and are ashamed of that divine idea which each of us represents. It may be safely trusted as proportionate and of good

Self-Reliance

issues, so it be faithfully imparted, but God will not have his work made manifest by cowards. A man is relieved and gay when he has put his heart into his work and done his best; but what he has said or done otherwise shall give him no peace. It is a deliverance which does not deliver. In the attempt his genius deserts him; no muse befriends; no invention, no hope.

Trust thyself: every heart vibrates to that iron string. Accept the place the divine providence has found for you, the society of your contemporaries, the connection of events. Great men have always done so, and confided themselves childlike to the genius of their age, betraying their perception that the absolutely trustworthy was seated at their heart, working through their hands, predominating in all their being. And we are now men, and must accept in the highest mind the same transcendent destiny; and not minors and invalids in a protected corner, not cowards fleeing before a revolution, but guides, redeemers and benefactors, obeying the Almighty effort and advancing on Chaos and the Dark.

What pretty oracles nature yields us on this text in the face and behavior of children, babes, and even brutes! That divided and rebel mind, that distrust of a sentiment because our arithmetic has computed the strength and means opposed to our purpose,

Emerson

these have not. Their mind being whole, their eye is as yet unconquered, and when we look in their faces we are disconcerted. Infancy conforms to nobody; all conform to it; so that one babe commonly makes four or five out of the adults who prattle and play to it. So God has armed youth and puberty and manhood no less with its own piquancy and charm, and made it enviable and gracious and its claims not to be put by, if it will stand by itself. Do not think the youth has no force, because he cannot speak to you and me. Hark! in the next room his voice is sufficiently clear and emphatic. It seems he knows how to speak to his contemporaries. Bashful or bold then, he will know how to make us seniors very unnecessary.

The nonchalance of boys who are sure of a dinner, and would disdain as much as a lord to do or say aught to conciliate one, is the healthy attitude of human nature. A boy is in the parlor what the pit is in the play-house; independent, irresponsible, looking out from his corner on such people and facts as pass by, he tries and sentences them on their merits, in the swift, summary way of boys, as good, bad, interesting, silly, eloquent, troublesome. He cumbers himself never about consequences, about interests; he gives an independent, genuine verdict. You must court him; he does not court you. But the man is as it were clapped into jail

Self-Reliance

by his consciousness. As soon as he has once acted or spoken with *éclat* he is a committed person, watched by the sympathy or the hatred of hundreds, whose affections must now enter into his account. There is no Lethe for this. Ah, that he could pass again into his neutrality! Who can thus avoid all pledges and, having observed, observe again from the same unaffected, unbiased, unbribeable, unaffrighted innocence,—must always be formidable. He would utter opinions on all passing affairs, which being seen to be not private but necessary, would sink like darts into the ear of men and put them in fear.

These are the voices which we hear in solitude, but they grow faint and inaudible as we enter into the world. Society everywhere is in conspiracy against the manhood of every one of its members. Society is a joint-stock company, in which the members agree, for the better securing of his bread to each shareholder, to surrender the liberty and culture of the eater. The virtue in most request is conformity. Self-reliance is its aversion. It loves not realities and creators, but names and customs.

Whoso would be a man, must be a non-conformist. He who would gather immortal palms must not be hindered by the name of goodness, but must explore if it be goodness. Nothing is at last sacred but the integrity of your own mind. Absolve you to yourself,

Emerson

and you shall have the suffrage of the world. I remember an answer which when quite young I was prompted to make to a valued adviser who was wont to importune me with the dear old doctrines of the church. On my saying, "What have I to do with the sacredness of traditions, if I live wholly from within?" my friend suggested,—“But these impulses may be from below, not from above.” I replied, “They do not seem to me to be such; but if I am the Devil’s child, I will live then from the Devil.” No law can be sacred to me but that of my nature. Good and bad are but names very readily transferable to that or this; the only right is what is after my constitution; the only wrong what is against it. A man is to carry himself in the presence of all opposition as if every thing were titular and ephemeral but he. I am ashamed to think how easily we capitulate to badges and names, to large societies and dead institutions. Every decent and well-spoken individual affects and sways me more than is right. I ought to go upright and vital, and speak the rude truth in all ways. If malice and vanity wear the coat of philanthropy, shall that pass? If an angry bigot assumes this bountiful cause of Abolition, and comes to me with his last news from Barbadoes, why should I not say to him, “Go love thy infant; love thy wood-chopper; be good-natured and modest; have

Self-Reliance

that grace; and never varnish your hard, uncharitable ambition with this incredible tenderness for black folk a thousand miles off. Thy love afar is spite at home." Rough and graceless would be such greeting, but truth is handsomer than the affectation of love. Your goodness must have some love to it,—else it is none. The doctrine of hatred must be preached, as the counteraction of the doctrine of love, when that pules and whines. I shun father and mother and wife and brother when my genius calls me. I would write on the lintels of the door-post, Whim. I hope it is somewhat better than whim at last, but we cannot spend the day in explanation. Expect me not to show cause why I seek or why I exclude company. Then again, do not tell me, as a good man did to-day, of my obligation to put all poor men in good situations. Are they *my* poor? I tell thee, thou foolish philanthropist, that I grudge the dollar, the dime, the cent I give to such men as do not belong to me and to whom I do not belong. There is a class of persons to whom by all spiritual affinity I am bought and sold; for them I will go to prison if need be; but your miscellaneous popular charities; the education at college of fools; the building of meeting-houses to the vain end to which many now stand; alms to sots, and the thousandfold Relief Societies;—though I confess with shame I sometimes succumb and

Emerson

give the dollar, it is a wicked dollar, which by and by I shall have the manhood to withhold.

Virtues are, in the popular estimate, rather the exception than the rule. There is the man *and* his virtues. Men do what is called a good action, as some piece of courage or charity, much as they would pay a fine in expiation of daily non-appearance on parade. Their works are done as an apology or extenuation of their living in the world,—as invalids and the insane pay a high board. Their virtues are penances. I do not wish to expiate, but to live. My life is for itself and not for a spectacle. I much prefer that it should be of a lower strain, so it be genuine and equal, than that it should be glittering and unsteady. I wish it to be sound and sweet, and not to need diet and bleeding. I ask primary evidence that you are a man, and refuse this appeal from the man to his actions. I know that for myself it makes no difference whether I do or forbear those actions which are reckoned excellent. I cannot consent to pay for a privilege where I have intrinsic right. Few and mean as my gifts may be, I actually am, and do not need for my own assurance or the assurance of my fellows any secondary testimony.

What I must do is all that concerns me, not what the people think. This rule, equally arduous in actual and in intellectual life, may serve

Self-Reliance

for the whole distinction between greatness and meanness. It is the harder because you will always find those who think they know what is your duty better than you know it, It is easy in the world to live after the world's opinion; it is easy in solitude to live after our own; but the great man is he who in the midst of the crowd keeps with perfect sweetness the independence of solitude.

The objection to conforming to usages that have become dead to you is that it scatters your force. It loses your time and blurs the impression of your character. If you maintain a dead church, contribute to a dead Bible-society, vote with a great party either for the government or against it, spread your table like base housekeepers,—under all these screens I have difficulty to detect the precise man you are: and of course so much force is withdrawn from your proper life. But do your work, and I shall know you. Do your work, and you shall reinforce yourself. A man must consider what a blindman's-buff is this game of conformity. If I know your sect I anticipate your argument. I hear a preacher announce for his text and topic the expediency of one of the institutions of his church. Do I not know beforehand that not possibly can he say a new and spontaneous word? Do I not know that with all this ostentation of examining the grounds of the institution he will do no

Emerson

such thing? Do I not know that he is pledged to himself not to look but at one side, the permitted side, not as a man, but as a parish minister? He is a retained attorney, and these airs of the bench are the emptiest affectation. Well, most men have bound their eyes with one or another handkerchief, and attached themselves to some one of these communities of opinion. This conformity makes them not false in a few particulars, authors of a few lies, but false in all particulars. Their every truth is not quite true. Their two is not the real two, their four not the real four; so that every word they say chagrins us and we know not where to begin to set them right. Meantime nature is not slow to equip us in the prison-uniform of the party to which we adhere. We come to wear one cut of face and figure, and acquire by degrees the gentlest asinine expression. There is a mortifying experience in particular, which does not fail to wreak itself also in the general history; I mean "the foolish face of praise," the forced smile which we put on in company where we do not feel at ease, in answer to conversation which does not interest us. The muscles, not spontaneously moved but moved by a low usurping wilfulness, grow tight about the outline of the face, with the most disagreeable sensation.

For nonconformity the world whips you

Self-Reliance

with its displeasure. And therefore a man must know how to estimate a sour face. The by-standers look askance on him in the public street or in the friend's parlor. If this aversation had its origin in contempt and resistance like his own he might well go home with a sad countenance; but the sour faces of the multitude, like their sweet faces, have no deep cause, but are put on and off as the wind blows and a newspaper directs. Yet is the discontent of the multitude more formidable than that of the senate and the college. It is easy enough for a firm man who knows the world to brook the rage of the cultivated classes. Their rage is decorous and prudent, for they are timid, as being very vulnerable themselves. But when to their feminine rage the indignation of the people is added, when the ignorant and the poor are aroused, when the unintelligent brute force that lies at the bottom of society is made to growl and mow, it needs the habit of magnanimity and religion to treat it godlike as a trifle of no concernment.

The other terror that scares us from self-trust is our consistency; a reverence for our past act or word because the eyes of others have no other data for computing our orbit than our past acts, and we are loath to disappoint them.

But why should you keep your head over your shoulder? Why drag about this corpse

Emerson

of your memory, lest you contradict somewhat you have stated in this or that public place? Suppose you should contradict yourself; what then? It seems to be a rule of wisdom never to rely on your memory alone, scarcely even in acts of pure memory, but to bring the past for judgment into the thousand-eyed present, and live ever in a new day. In your metaphysics you have denied personality to the Deity, yet when the devout motions of the soul come, yield to them heart and life, though they should clothe God with shape and color. Leave your theory, as Joseph his coat in the hand of the harlot, and flee.

A foolish consistency is the hobgoblin of little minds, adored by little statesmen and philosophers and divines. With consistency a great soul has simply nothing to do. He may as well concern himself with his shadow on the wall. Speak what you think now in hard words and to-morrow speak what to-morrow thinks in hard words again, though it contradict every thing you said to-day.—“Ah, so you shall be sure to be misunderstood.”—Is it so bad then to be misunderstood? Pythagoras was misunderstood, and Socrates, and Jesus, and Luther, and Copernicus, and Galileo, and Newton, and every pure and wise spirit that ever took flesh. To be great is to be misunderstood.

I suppose no man can violate his nature.

Self-Reliance

All the sallies of his will are rounded in by the law of his being, as the inequalities of Andes and Himmaleh are insignificant in the curve of the sphere. Nor does it matter how you gauge and try him. A character is like an acrostic or Alexandrian stanza;—read it forward, backward, or across, it still spells the same thing. In this pleasing contrite wood-life which God allows me, let me record day by day my honest thought without prospect or retrospect, and, I cannot doubt, it will be found symmetrical, though I mean it not and see it not. My book should smell of pines and resound with the hum of insects. The swallow over my window should interweave that thread or straw he carries in his bill into my web also. We pass for what we are. Character teaches above our wills. Men imagine that they communicate their virtue or vice only by overt actions, and do not see that virtue or vice emit a breath every moment.

There will be an agreement in whatever variety of actions, so they be each honest and natural in their hour. For of one will, the actions will be harmonious, however unlike they seem. These varieties are lost sight of at a little distance, at a little height of thought. One tendency unites them all. The voyage of the best ship is a zigzag line of a hundred tacks. See the line from a sufficient distance, and it straightens itself to

Emerson

the average tendency. Your genuine action will explain itself and will explain your other genuine actions. Your conformity explains nothing. Act singly, and what you have already done singly will justify you now. Greatness appeals to the future. If I can be firm enough to-day to do right and scorn eyes, I must have done so much right before as to defend me now. Be it how it will, do right now. Always scorn appearances and you always may. The force of character is cumulative. All the foregone days of virtue work their health into this. What makes the majesty of the heroes of the senate and the field, which so fills the imagination? The consciousness of a train of great days and victories behind. They shed an united light on the advancing actor. He is attended as by a visible escort of angels. That is it which throws thunder into Chatham's voice, and dignity into Washington's port, and America into Adams's eye. Honor is venerable to us because it is no ephemera. It is always ancient virtue. We worship it to-day because it is not of to-day. We love it and pay it homage because it is not a trap for our love and homage, but is self-dependent, self-derived, and therefore of an old immaculate pedigree, even if shown in a young person.

I hope in these days we have heard the last of conformity and consistency. Let the

Self-Reliance

words be gazetted and ridiculous henceforward. Instead of the gong for dinner, let us hear a whistle from the Spartan fife. Let us never bow and apologize more. A great man is coming to eat at my house. I do not wish to please him; I wish that he should wish to please me. I will stand here for humanity, and though I would make it kind, I would make it true. Let us affront and reprimand the smooth mediocrity and squalid contentment of the times, and hurl in the face of custom and trade and office, the fact which is the upshot of all history, that there is a great responsible Thinker and Actor working wherever a man works; that a true man belongs to no other time or place, but is the centre of things. Where he is, there is nature. He measures you and all men and all events. Ordinarily, every body in society reminds us of somewhat else, or of some other person. Character, reality, reminds you of nothing else; it takes place of the whole creation. The man must be so much that he must make all circumstances indifferent. Every true man is a cause, a country, and an age; requires infinite spaces and numbers and time fully to accomplish his design;—and posterity seem to follow his steps as a train of clients. A man Cæsar is born, and for ages after we have a Roman Empire. Christ is born, and millions of minds so grow and cleave to his genius that

Emerson

he is confounded with virtue and the possible of man. An institution is the lengthened shadow of one man; as, Monachism, of the Hermit Antony; the Reformation, of Luther; Quakerism, of Fox; Methodism, of Wesley; Abolition, of Clarkson. Scipio, Milton called "the height of Rome"; and all history resolves itself very easily into the biography of a few stout and earnest persons.

Let a man then know his worth, and keep things under his feet. Let him not peep or steal, or skulk up and down with the air of a charity-boy, a bastard, or an interloper in the world which exists for him. But the man in the street, finding no worth in himself which corresponds to the force which built a tower or sculptured a marble god, feels poor when he looks on these. To him a palace, a statue, or a costly book have an alien and forbidding air, much like a gay equipage, and seem to say like that, "Who are you, Sir?" Yet they all are his, suitors for his notice, petitioners to his faculties that they will come out and take possession. The picture waits for my verdict; it is not to command me, but I am to settle its claims to praise. That popular fable of the sot who was picked up dead-drunk in the street, carried to the duke's house, washed and dressed and laid in the duke's bed, and, on his waking, treated with all obsequious ceremony like

Self-Reliance

the duke, and assured that he had been insane, owes its popularity to the fact that it symbolizes so well the state of man, who is in the world a sort of sot, but now and then wakes up, exercises his reason and finds himself a true prince.

Our reading is mendicant and sycophantic. In history our imagination plays us false. Kingdom and lordship, power and estate, are a gaudier vocabulary than private John and Edward in a small house and common day's work; but the things of life are the same to both; the sum total of both is the same. Why all this deference to Alfred and Scanderbeg and Gustavus? Suppose they were virtuous; did they wear out virtue? As great a stake depends on your private act to-day as followed their public and renowned steps. When private men shall act with original views, the lustre will be transferred from the actions of kings to those of gentlemen.

The world has been instructed by its kings, who have so magnetized the eyes of nations. It has been taught by this colossal symbol the mutual reverence that is due from man to man. The joyful loyalty with which men have everywhere suffered the king, the noble, or the great proprietor to walk among them by a law of his own, make his own scale of men and things and reverse theirs, pay for benefits not with money but with honor, and

Emerson

represent the law in his person, was the hieroglyphic by which they obscurely signified their consciousness of their own right and comeliness, the right of every man.

The magnetism which all original action exerts is explained when we inquire the reason of self-trust. Who is the Trustee? What is the aboriginal Self, on which a universal reliance may be grounded? What is the nature and power of that science-baffling star, without parallax, without calculable elements, which shoots a ray of beauty even into trivial and impure actions, if the least mark of independence appear? The inquiry leads us to that source, at once the essence of genius, of virtue, and of life, which we call Spontaneity or Instinct. We denote this primary wisdom as Intuition, whilst all later teachings are tuitions. In that deep force, the last fact behind which analysis cannot go, all things find their common origin. For the sense of being which in calm hours rises, we know not how, in the soul, is not diverse from things, from space, from light, from time, from man, but one with them and proceeds obviously from the same source whence their life and being also proceed. We first share the life by which things exist and afterwards see them as appearances in nature and forget that we have shared their cause. Here is the fountain of action and of thought. Here are the lungs of that inspira-

Self-Reliance

tion which giveth man wisdom and which cannot be denied without impiety and atheism. We lie in the lap of immense intelligence, which makes us receivers of its truth and organs of its activity. When we discern justice, when we discern truth, we do nothing of ourselves, but allow a passage to its beams. If we ask whence this comes, if we seek to pry into the soul that causes, all philosophy is at fault. Its presence or its absence is all we can affirm. Every man discriminates between the voluntary acts of his mind and his involuntary perceptions, and knows that to his involuntary perceptions a perfect faith is due. He may err in the expression of them, but he knows that these things are so, like day and night, not to be disputed. My wilful actions and acquisitions are but roving;—the idlest reverie, the faintest native emotion, command my curiosity and respect. Thoughtless people contradict as readily the statement of perceptions as of opinions, or rather much more readily; for they do not distinguish between perception and opinion. They fancy that I choose to see this or that thing. But perception is not whimsical, but fatal. If I see a trait, my children will see it after me, and in course of time all mankind,—although it may chance that no one has seen it before me. For my perception of it is as much a fact as the sun.

Emerson

The relations of the soul to the divine spirit are so pure that it is profane to seek to interpose helps. It must be that when God speaketh he should communicate, not one thing, but all things; should fill the world with his voice; should scatter forth light, nature, time, souls, from the centre of the present thought; and new date and new create the whole. Whenever a mind is simple and receives a divine wisdom, old things pass away,—means, teachers, texts, temples fall; it lives now, and absorbs past and future into the present hour. All things are made sacred by relation to it,—one as much as another. All things are dissolved to their centre by their cause, and in the universal miracle petty and particular miracles disappear. If therefore a man claims to know and speak of God and carries you backward to the phraseology of some old mouldered nation in another country, in another world, believe him not. Is the acorn better than the oak which is its fulness and completion? Is the parent better than the child into whom he has cast his ripened being? Whence then this worship of the past? The centuries are conspirators against the sanity and authority of the soul. Time and space are but physiological colors which the eye makes, but the soul is light: where it is, is day; where it was, is night; and history is an impertinence and an injury if it be any thing

Self-Reliance

more than a cheerful apologue or parable of my being and becoming.

Man is timid and apologetic; he is no longer upright; he dares not say "I think," "I am," but quotes some saint or sage. He is ashamed before the blade of grass or the blowing rose. These roses under my window make no reference to former roses or to better ones; they are for what they are; they exist with God to-day. There is no time to them. There is simply the rose; it is perfect in every moment of its existence. Before a leaf-bud has burst, its whole life acts; in the full-blown flower there is no more; in the leafless root there is no less. Its nature is satisfied and it satisfies nature in all moments alike. But man postpones or remembers; he does not live in the present, but with reverted eye laments the past, or, heedless of the riches that surround him, stands on tiptoe to foresee the future. He cannot be happy and strong until he too lives with nature in the present, above time.

This should be plain enough. Yet see what strong intellects dare not yet hear God himself unless he speak the phraseology of I know not what David, or Jeremiah, or Paul. We shall not always set so great a price on a few texts, on a few lives. We are like children who repeat by rote the sentences of grandames and tutors, and, as they grow older, of the men of talents and character

Emerson

they chance to see,—painfully recollecting the exact words they spoke; afterwards, when they come into the point of view which those had who uttered these sayings, they understand them and are willing to let the words go; for at any time they can use words as good when occasion comes. If we live truly, we shall see truly. It is as easy for the strong man to be strong, as it is for the weak to be weak. When we have new perception, we shall gladly disburden the memory of its hoarded treasures as old rubbish. When a man lives with God, his voice shall be as sweet as the murmur of the brook and the rustle of the corn.

And now at last the highest truth on this subject remains unsaid; probably cannot be said; for all that we say is the far-off remembering of the intuition. That thought by what I can now nearest approach to say it, is this. When good is near you, when you have life in yourself, it is not by any known or accustomed way; you shall not discern the footprints of any other; you shall not see the face of man; you shall not hear any name;—the way, the thought, the good, shall be wholly strange and new. It shall exclude example and experience. You take the way from man, not to man. All persons that ever existed are its forgotten ministers. Fear and hope are alike beneath it. There is somewhat low even in hope. In the hour of

Self-Reliance

vision there is nothing that can be called gratitude, nor properly joy. The soul raised over passion beholds identity and eternal causation, perceives the self-existence of Truth and Right, and calms itself with knowing that all things go well. Vast spaces of nature, the Atlantic Ocean, the South Sea; long intervals of time, years, centuries, are of no account. This which I think and feel underlay every former state of life and circumstances, as it does underlie my present, and what is called life and what is called death.

Life only avails, not the having lived. Power ceases in the instant of repose; it resides in the moment of transition from a past to a new state, in the shooting of the gulf, in the darting to an aim. This one fact the world hates; that the soul *becomes*; for that forever degrades the past, turns all riches to poverty, all reputation to a shame, confounds the saint with the rogue, shoves Jesus and Judas equally aside. Why then do we prate of self-reliance? Inasmuch as the soul is present there will be power not confident but agent. To talk of reliance is a poor external way of speaking. Speak rather of that which relies because it works and is. Who has more obedience than I masters me, though he should not raise his finger. Round him I must revolve by the gravitation of spirits. We fancy it rhetoric

Emerson

when we speak of eminent virtue. We do not yet see that virtue is Height, and that a man or a company of men, plastic and permeable to principles, by the law of nature must overpower and ride all cities, nations, kings, rich men, poets, who are not.

This is the ultimate fact which we so quickly reach on this, as on every topic, the resolution of all into the ever-blessed ONE. Self-existence is the attribute of the Supreme Cause, and it constitutes the measure of good by the degree in which it enters into all lower forms. All things real are so by so much virtue as they contain." Commerce, husbandry, hunting, whaling, war, eloquence, personal weight, are somewhat, and engage my respect as examples of its presence and impure action. I see the same law working in nature for conservation and growth. Power is, in nature, the essential measure of right. Nature suffers nothing to remain in her kingdoms which cannot help itself. The genesis and maturation of a planet, its poise and orbit, the bended tree recovering itself from the strong wind, the vital resources of every animal and vegetable, are demonstrations of the self-sufficing and therefore self-relying soul.

Thus all concentrates: let us not rove; let us sit at home with the cause. Let us stun and astonish the intruding rabble of men and books and institutions by a simple declara-

Self-Reliance

tion of the divine fact. Bid the invaders take the shoes from off their feet, for God is here within. Let our simplicity judge them, and our docility to our own law demonstrate the poverty of nature and fortune beside our native riches.

But now we are a mob. Man does not stand in awe of man, nor is his genius admonished to stay at home, to put itself in communication with the internal ocean, but it goes abroad to beg a cup of water of the urns of other men. We must go alone. I like the silent church before the service begins, better than any preaching. How far off, how cool, how chaste the persons look, begirt each one with a precinct or sanctuary! So let us always sit. Why should we assume the faults of our friend, or wife, or father, or child, because they sit around our hearth, or are said to have the same blood? All men have my blood and I have all men's. Not for that will I adopt their petulance or folly, even to the extent of being ashamed of it. But your isolation must not be mechanical, but spiritual, that is, must be elevation. At times the whole world seems to be in conspiracy to importune you with emphatic trifles. Friend, client, child, sickness, fear, want, charity, all knock at once at thy closet door and say,—“Come out unto us.” But keep thy state, come not into their confusion. The power men possess to annoy me

Emerson

I give them by a weak curiosity. No man can come near me but through my act. "What we love that we have, but by desire we bereave ourselves of the love."

If we cannot at once rise to the sanctities of obedience and faith, let us at least resist our temptations; let us enter into the state of war and wake Thor and Woden, courage and constancy, in our Saxon breasts. This is to be done in our smooth times by speaking the truth. Check this lying hospitality and lying affection. Live no longer to the expectation of these deceived and deceiving people with whom we converse. Say to them, "O father, O mother, O wife, O brother, O friend, I have lived with you after appearances hitherto. Henceforward I am the truth's. Be it known unto you that henceforward I obey no law less than the eternal law. I will have no covenants but proximities. I shall endeavor to nourish my parents, to support my family, to be the chaste husband of one wife,—but these relations I must fill after a new and unprecedented way. I appeal from your customs. I must be myself. I cannot break myself any longer for you, or you. If you can love me for what I am, we shall be the happier. If you cannot, I will still seek to deserve that you should. I will not hide my tastes or aversions. I will so trust that what is deep is holy, that I will do strongly before the sun and moon what-

Self-Reliance

ever inly rejoices me and the heart appoints. If you are noble, I will love you; if you are not, I will not hurt you and myself by hypocritical attentions. If you are true, but not in the same truth with me, cleave to your companions; I will seek my own. I do this not selfishly but humbly and truly. It is alike your interest, and mine, and all men's, however long we have dwelt in lies, to live in truth. Does this sound harsh to-day? You will soon love what is dictated by your nature as well as mine, and if we follow the truth it will bring us out safe at last."—But so may you give these friends pain. Yes, but I cannot sell my liberty and my power, to save their sensibility. Besides, all persons have their moments of reason, when they look out into the region of absolute truth; then will they justify me and do the same thing.

The populace think that your rejection of popular standards is a rejection of all standard, and mere antinomianism; and the bold sensualist will use the name of philosophy to gild his crimes. But the law of consciousness abides. There are two confessionals, in one or the other of which we must be shriven. You may fulfil your round of duties by clearing yourself in the *direct*, or in the *reflex* way. Consider whether you have satisfied your relations to father, mother, cousin, neighbor, town, cat and dog; whether any

Emerson

of these can upbraid you. But I may also neglect this reflex standard and absolve me to myself. I have my own stern claims and perfect circle. It denies the name of duty to many offices that are called duties. But if I can discharge its debts it enables me to dispense with the popular code. If any one imagines that this law is lax, let him keep its commandment one day.

And truly it demands something godlike in him who has cast off the common motives of humanity, and has ventured to trust himself for a taskmaster. High be his heart, faithful his will, clear his sight, that he may in good earnest be doctrine, society, law, to himself, that a simple purpose may be to him as strong as iron necessity is to others!

If any man consider the present aspects of what is called by distinction *society*, he will see the need of these ethics. The sinew and heart of man seem to be drawn out, and we are become timorous, desponding whimpers. We are afraid of truth, afraid of fortune, afraid of death and afraid of each other. Our age yields no great and perfect persons. We want men and women who shall renovate life and our social state, but we see that most natures are insolvent, cannot satisfy their own wants, have an ambition out of all proportion to their practical force and do lean and beg day and night continually. Our housekeeping is mendicant, our arts, our

Self-Reliance

occupations, our marriages, our religion we have not chosen, but society has chosen for us. We are parlor soldiers. We shun the rugged battle of fate, where strength is born.

If our young men miscarry in their first enterprises they lose all heart. If the young merchant fails, men say he is *ruined*. If the finest genius studies at one of our colleges and is not installed in an office within one year afterwards in the cities or suburbs of Boston or New York, it seems to his friends and to himself that he is right in being disheartened and in complaining the rest of his life. A sturdy lad from New Hampshire or Vermont, who in turn tries all the professions, who *teams it, farms it, peddles*, keeps a school, preaches, edits a newspaper, goes to Congress, buys a township, and so forth, in successive years, and always like a cat falls on his feet, is worth a hundred of these city dolls. He walks abreast with his days and feels no shame in not "studying a profession," for he does not postpone his life, but lives already. He has not one chance, but a hundred chances. Let a Stoic open the resources of man and tell men they are not leaning willows, but can and must detach themselves; that with the exercise of self-trust, new powers shall appear; that a man is the word made flesh, born to shed healing to the nations; that he should be ashamed of our compassion, and that the moment he

Emerson

acts from himself, tossing the laws, the books, idolatries and customs out of the window, we pity him no more but thank and revere him;—and that teacher shall restore the life of man to splendor and make his name dear to all history.

It is easy to see that a greater self-reliance must work a revolution in all the offices and relations of men; in their religion; in their education; in their pursuits; their modes of living; their associations; in their property; in their speculative views.

1. In what prayers do men allow themselves! That which they call a holy office is not so much as brave and manly. Prayer looks abroad and asks for some foreign addition to come through some foreign virtue, and loses itself in endless mazes of natural and supernatural, and mediatorial and miraculous. Prayer that craves a particular commodity, anything less than all good, is vicious. Prayer is the contemplation of the facts of life from the highest point of view. It is the soliloquy of a beholding and jubilant soul. It is the spirit of God pronouncing his works good. But prayer as a means to effect a private end is meanness and theft. It supposes dualism and not unity in nature and consciousness. As soon as the man is at one with God, he will not beg. He will then see prayer in all action. The prayer of the farmer kneeling in his field to weed it, the

Self-Reliance

prayer of the rower kneeling with the stroke of his oar, are true prayers heard throughout nature, though for cheap ends. Caratach, in Fletcher's *Bonduca*, when admonished to inquire the mind of the god *Audate*, replies,—

“His hidden meaning lies in our endeavors;
Our valors are our best gods.”

Another sort of false prayers are our regrets. Discontent is the want of self-reliance: it is infirmity of will. Regret calamities if you can thereby help the sufferer; if not, attend your own work and already the evil begins to be repaired. Our sympathy is just as base. We come to them who weep foolishly and sit down and cry for company, instead of imparting to them truth and health in rough electric shocks, putting them once more in communication with their own reason. The secret of fortune is joy in our hands. Welcome evermore to gods and men is the self-helping man. For him all doors are flung wide; him all tongues greet, all honors crown, all eyes follow with desire. Our love goes out to him and embraces him because he did not need it. We solicitously and apologetically caress and celebrate him because he held on his way and scorned our disapprobation. The gods love him because men hated him. “To the persevering mortal,” said Zoroaster, “the blessed Immortals are swift.”

Emerson

As men's prayers are a disease of the will, so are their creeds a disease of the intellect. They say with those foolish Israelites, "Let not God speak to us, lest we die. Speak thou, speak any man with us, and we will obey." Everywhere I am hindered of meeting God in my brother, because he has shut his own temple doors and recites fables merely of his brother's, or his brother's brother's God. Every new mind is a new classification. If it prove a mind of uncommon activity and power, a Locke, a Lavoisier, a Hutton, a Bentham, a Fourier, it imposes its classification on other men, and lo! a new system. In proportion to the depth of the thought, and so to the number of the objects it touches and brings within reach of the pupil, is his complacency. But chiefly is this apparent in creeds and churches which are also classifications of some powerful mind acting on the elemental thought of duty and man's relation to the Highest. Such is Calvinism, Quakerism, Swedenborgism. The pupil takes the same delight in subordinating every thing to the new terminology as a girl who has just learned botany in seeing a new earth and new seasons thereby. It will happen for a time that the pupil will find his intellectual power has grown by the study of his master's mind. But in all unbalanced minds the classification is idolized, passes for the end and not for a

Self-Reliance

speedily exhaustible means, so that the walls of the system blend to their eye in the remote horizon with the walls of the universe; the luminaries of heaven seem to them hung on the arch their master built. They cannot imagine how you aliens have any right to see,—how you can see; “It must be somehow that you stole the light from us.” They do not yet perceive that light, unsystematic, indomitable, will break into any cabin, even into theirs. Let them chirp awhile and call it their own. If they are honest and do well, presently their neat new pinfold will be too strait and low, will crack, will lean, will rot and vanish, and the immortal light, all young and joyful, million-orbed, million-colored, will beam over the universe as on the first morning.

2. It is for want of self-culture that the superstition of Travelling, whose idols are Italy, England, Egypt, retains its fascination for all educated Americans. They who made England, Italy, or Greece venerable in the imagination, did so by sticking fast where they were, like an axis of the earth. In manly hours we feel that duty is our place. The soul is no traveller; the wise man stays at home, and when his necessities, his duties, on any occasion call him from his house, or into foreign lands, he is at home still and shall make men sensible by the expression of his countenance that he goes, the

Emerson

missionary of wisdom and virtue, and visits cities and men like a sovereign and not like an interloper or a valet.

I have no churlish objection to the circumnavigation of the globe for the purposes of art, of study, and benevolence, so that man is first domesticated, or does not go abroad with the hope of finding somewhat greater than he knows. He who travels to be amused, or to get somewhat which he does not carry, travels away from himself, and grows old even in youth among old things. In Thebes, in Palmyra, his will and mind have become old and dilapidated as they. He carries ruins to ruins.

Travelling is a fool's paradise. Our first journeys discover to us the indifference of places. At home I dream that at Naples, at Rome, I can be intoxicated with beauty and lose my sadness. I pack my trunk, embrace my friends, embark on the sea and at last wake up at Naples, and there beside me is the stern fact, the sad self, unrelenting, identical, that I fled from. I seek the Vatican and the palaces. I affect to be intoxicated with sights and suggestions, but I am not intoxicated. My giant goes with me wherever I go.

3. But the rage of travelling is a symptom of a deeper unsoundness affecting the whole intellectual action. The intellect is vagabond, and our system of education fosters

Self-Reliance

restlessness. Our minds travel when our bodies are forced to stay at home. We imitate; and what is imitation but the traveling of the mind? Our houses are built with foreign taste; our shelves are garnished with foreign ornaments; our opinions, our tastes, our faculties, lean, and follow the Past and the Distant. The soul created the arts wherever they have flourished. It was in his own mind that the artist sought his model. It was an application of his own thought to the thing to be done and the conditions to be observed. And why need we copy the Doric or the Gothic model? Beauty, convenience, grandeur of thought and quaint expression are as near to us as to any, and if the American artist will study with hope and love the precise thing to be done by him, considering the climate, the soil, the length of the day, the wants of the people, the habit and form of the government, he will create a house in which all these will find themselves fitted, and taste and sentiment will be satisfied also.

Insist on yourself; never imitate. Your own gift you can present every moment with the cumulative force of a whole life's cultivation; but of the adopted talent of another you have only an extemporaneous half possession. That which each can do best, none but his Maker can teach him. No man yet knows what it is, nor can, till that per-

Emerson

son has exhibited it. Where is the master who could have taught Shakspeare? Where is the master who could have instructed Franklin, or Washington, or Bacon, or Newton? Every great man is a unique. The Scipionism of Scipio is precisely that part he could not borrow. Shakspeare will never be made by the study of Shakspeare. Do that which is assigned you, and you cannot hope too much or dare too much. There is at this moment for you an utterance brave and grand as that of the colossal chisel of Phidias, or trowel of the Egyptians, or the pen of Moses or Dante, but different from all these. Not possibly will the soul, all rich, all eloquent, with thousand-cloven tongue, deign to repeat itself; but if you can hear what these patriarchs say, surely you can reply to them in the same pitch of voice; for the ear and the tongue are two organs of one nature. Abide in the simple and noble regions of thy life, obey thy heart and thou shalt reproduce the Foreworld again.

4. As our Religion, our Education, our Art look abroad, so does our spirit of society. All men plume themselves on the improvement of society, and no man improves.

Society never advances. It recedes as fast on one side as it gains on the other. It undergoes continual changes; it is barbarous, it is civilized, it is christianized, it is rich, it is scientific; but this change is not ameliora-

Self-Reliance

tion. For every thing that is given something is taken. Society acquires new arts and loses old instincts. What a contrast between the well-clad, reading, writing, thinking American, with a watch, a pencil and a bill of exchange in his pocket, and the naked New Zealander, whose property is a club, a spear, a mat, and an undivided twentieth of a shed to sleep under! But compare the health of the two men and you shall see that the white man has lost his aboriginal strength. If the traveller tell us truly, strike the savage with a broad axe and in a day or two the flesh shall unite and heal as if you struck the blow into soft pitch, and the same blow shall send the white to his grave.

The civilized man has built a coach, but has lost the use of his feet. He is supported on crutches, but lacks so much support of muscle. He has a fine Geneva watch, but he fails of the skill to tell the hour by the sun. A Greenwich nautical almanac he has, and so being sure of the information when he wants it, the man in the street does not know a star in the sky. The solstice he does not observe; the equinox he knows a little; and the whole bright calendar of the year is without a dial in his mind. His note-books impair his memory; his libraries overload his wit; the insurance-office increases the number of accidents; and it may be a question whether machinery does not encumber;

Emerson

whether we have not lost by refinement some energy, by a Christianity entrenched in establishments and forms some vigor of wild virtue. For every Stoic was a Stoic; but in Christendom where is the Christian?

There is no more deviation in the moral standard than in the standard of height or bulk. No greater men are now than ever were. A singular equality may be observed between the great men of the first and of the last ages; nor can all the science, art, religion, and philosophy of the nineteenth century avail to educate greater men than Plutarch's heroes, three or four and twenty centuries ago. Not in time is the race progressive. Phocion, Socrates, Anaxagoras, Diogenes, are great men, but they leave no class. He who is really of their class will not be called by their name, but will be his own man, and in his turn the founder of a sect. The arts and inventions of each period are only its costume and do not invigorate men. The harm of the improved machinery may compensate its good. Hudson and Behring accomplished so much in their fishing-boats as to astonish Parry and Franklin, whose equipment exhausted the resources of science and art. Galileo, with an opera-glass, discovered a more splendid series of celestial phenomena than any one since. Columbus found the New World in an undecked boat. It is curious to see the periodi-

Self-Reliance

cal disuse and perishing of means and machinery which were introduced with loud laudation a few years or centuries before. The great genius returns to essential man. We reckoned the improvements of the art of war among the triumphs of science, and yet Napoleon conquered Europe by the bivouac, which consisted of falling back on naked valor and disencumbering it of all aids. The Emperor held it impossible to make a perfect army, says Las Casas, "without abolishing our arms, magazines, commissaries and carriages, until, in imitation of the Roman custom, the soldier should receive his supply of corn, grind it in his hand-mill and bake his bread himself."

Society is a wave. The wave moves onward, but the water of which it is composed does not. The same particle does not rise from the valley to the ridge. Its unity is only phenomenal. The persons who make up a nation to-day, next year die, and their experience dies with them.

And so the reliance on Property, including the reliance on governments which protect it, is the want of self-reliance. Men have looked away from themselves and at things so long that they have come to esteem the religious, learned and civil institutions as guards of property, and they deprecate assaults on these, because they feel them to be assaults on property. They measure their

Emerson

esteem of each other by what each has, and not by what each is. But a cultivated man becomes ashamed of his property, out of new respect for his nature. Especially he hates what he has if he see that it is accidental,—came to him by inheritance, or gift, or crime; then he feels that it is not having; it does not belong to him, has no root in him and merely lies there because no revolution or no robber takes it away. But that which a man is, does always by necessity acquire; and what the man acquires, is living property, which does not wait the beck of rulers, or mobs, or revolutions, or fire, or storm, or bankruptcies, but perpetually renews itself wherever the man breathes. “Thy lot or portion of life,” said the Caliph Ali, “is seeking after thee; therefore be at rest from seeking after it.” Our dependence on these foreign goods leads us to our slavish respect for numbers. The political parties meet in numerous conventions; the greater the concourse and with each new uproar of announcement, The delegation from Essex! The Democrats from New Hampshire! The Whigs of Maine! the young patriot feels himself stronger than before by a new thousand of eyes and arms. In like manner the reformers summon conventions and vote and resolve in multitude. Not so, O friends! will the God deign to enter and inhabit you, but by a method precisely the reverse. It is only

Self-Reliance

as a man puts off all foreign support and stands alone that I see him to be strong and to prevail. He is weaker by every recruit to his banner. Is not a man better than a town? Ask nothing of men, and, in the endless mutation, thou only firm column must presently appear the upholder of all that surrounds thee. He who knows that power is inborn, that he is weak because he has looked for good out of him and elsewhere, and, so perceiving, throws himself unhesitatingly on his thought, instantly rights himself, stands in the erect position, commands his limbs, works miracles; just as a man who stands on his feet is stronger than a man who stands on his head.

So use all that is called Fortune. Most men gamble with her, and gain all, and lose all, as her wheel rolls. But do thou leave as unlawful these winnings, and deal with Cause and Effect, the chancellors of God. In the Will work and acquire, and thou hast chained the wheel of Chance, and shalt sit hereafter out of fear from her rotations. A political victory, a rise of rents, the recovery of your sick or the return of your absent friend, or some other favorable event raises your spirits, and you think good days are preparing for you. Do not believe it. Nothing can bring you peace but yourself. Nothing can bring you peace but the triumph of principles.

Nature

NATURE.

There are days which occur in this climate, at almost any season of the year, wherein the world reaches its perfection; when the air, the heavenly bodies and the earth, make a harmony, as if nature would indulge her offspring; when, in these bleak upper sides of the planet, nothing is to desire that we have heard of the happiest latitudes, and we bask in the shining hours of Florida and Cuba; when everything that has life gives sign of satisfaction, and the cattle that lie on the ground seem to have great and tranquil thoughts. These halcyons may be looked for with a little more assurance in that pure October weather which we distinguish by the name of the Indian summer. The day, immeasurably long, sleeps over the broad hills and warm wide fields. To have lived through all its sunny hours, seems longevity enough. The solitary places do not seem quite lonely. At the gates of the forest, the surprised man of the world is forced to leave his city estimates of great and small, wise and foolish. The knapsack of custom falls off his back with the first step he takes into these precincts. Here is sanctity which

Emerson

shames our religions, and reality which discredits our heroes. Here we find Nature to be the circumstance which dwarfs every other circumstance, and judges like a god all men that come to her. We have crept out of our close and crowded houses into the night and morning, and we see what majestic beauties daily wrap us in their bosom. How willingly we would escape the barriers which render them comparatively impotent, escape the sophistication and second thought, and suffer nature to intrance us. The tempered light of the woods is like a perpetual morning, and is stimulating and heroic. The anciently-reported spells of these places creep on us. The stems of pines, hemlocks, and oaks almost gleam like iron on the excited eye. The incommunicable trees begin to persuade us to live with them, and quit our life of solemn trifles. Here no history, or church, or state, is interpolated on the divine sky and the immortal year. How easily we might walk onward into the opening landscape, absorbed by new pictures and by thoughts fast succeeding each other, until by degrees the recollection of home was crowded out of the mind, all memory obliterated by the tyranny of the present, and we were led in triumph by nature.

These enchantments are medicinal, they sober and heal us. These are plain pleasures, kindly and native to us. We come to our

Nature

own, and make friends with matter, which the ambitious chatter of the schools would persuade us to despise. We never can part with it; the mind loves its old home: as water to our thirst, so is the rock, the ground, to our eyes and hands and feet. It is firm water; it is cold flame; what health, what affinity! Ever an old friend, ever like a dear friend and brother when we chat affectedly with strangers, comes in this honest face, and takes a grave liberty with us, and shames us out of our nonsense. Cities give not the human senses room enough. We go out daily and nightly to feed the eyes on the horizon, and require so much scope, just as we need water for our bath. There are all degrees of natural influence, from these quarantine powers of nature, up to her dearest and gravest ministrations to the imagination and the soul. There is the bucket of cold water from the spring, the wood-fire to which the chilled traveller rushes for safety,—and there is the sublime moral of autumn and of noon. We nestle in nature, and draw our living as parasites from her roots and grains, and we receive glances from the heavenly bodies, which call us to solitude and foretell the remotest future. The blue zenith is the point in which romance and reality meet. I think if we should be rapt away into all that we dream of heaven, and should converse with

Emerson

Gabriel and Uriel, the upper sky would be all that would remain of our furniture.

It seems as if the day was not wholly profane in which we have given heed to some natural object. The fall of snowflakes in a still air, preserving to each crystal its perfect form; the blowing of sleet over a wide sheet of water, and over plains; the waving rye-field; the mimic waving of acres of houstonia, whose innumerable florets whiten and ripple before the eye; the reflections of trees and flowers in glassy lakes; the musical steaming odorous south wind, which converts all trees to windharps; the crackling and spurting of hemlock in the flames, or of pine logs, which yield glory to the walls and faces in the sitting-room,—these are the music and pictures of the most ancient religion. My house stands in low land, with limited outlook, and on the skirt of the village. But I go with my friend to the shore of our little river, and with one stroke of the paddle I leave the village politics and personalities, yes, and the world of villages and personalities, behind, and pass into a delicate realm of sunset and moonlight, too bright almost for spotted man to enter without novitiate and probation. We penetrate bodily this incredible beauty; we dip our hands in this painted element; our eyes are bathed in these lights and forms. A holiday, a villeggiatura, a royal revel, the proudest,

Nature

most heart-rejoicing festival that valor and beauty, power and taste, ever decked and enjoyed, establishes itself on the instant. These sunset clouds, these delicately emerging stars, with their private and ineffable glances, signify it and proffer it. I am taught the poorness of our invention, the ugliness of towns and palaces. Art and luxury have early learned that they must work as enhancement and sequel to this original beauty. I am overinstructed for my return. Henceforth I shall be hard to please. I cannot go back to toys. I am grown expensive and sophisticated. I can no longer live without elegance, but a countryman shall be my master of revels. He who knows the most; he who knows what sweets and virtues are in the ground, the waters, the plants, the heavens, and how to come at these enchantments,—is the rich and royal man. Only as far as the masters of the world have called in nature to their aid, can they reach the height of magnificence. This is the meaning of their hanging-gardens, villas, garden-houses, islands, parks and preserves, to back their faulty personality with these strong accessories. I do not wonder that the landed interest should be invincible in the State with these dangerous auxiliaries. These bribe and invite; not kings, not palaces, not men, not women, but these tender and poetic stars, eloquent of secret promises.

Emerson

We heard what the rich man said, we knew of his villa, his grove, his wine and his company, but the provocation and point of the invitation came out of these beguiling stars. In their soft glances I see what men strove to realize in some Versailles, or Paphos, or Ctesiphon. Indeed, it is the magical lights of the horizon and the blue sky for the background which save all our works of art, which were otherwise bawbles. When the rich tax the poor with servility and obsequiousness, they should consider the effect of men reputed to be the possessors of nature, on imaginative minds. Ah! if the rich were rich as the poor fancy riches! A boy hears a military band play on the field at night, and he has kings and queens and famous chivalry palpably before him. He hears the echoes of a horn in a hill country, in the Notch Mountains, for example, which converts the mountains into an *Æolian* harp,—and this supernatural *tiralira* restores to him the Dorian mythology, Apollo, Diana, and all divine hunters and huntresses. Can a musical note be so lofty, so haughtily beautiful! To the poor young poet, thus fabulous is his picture of society; he is loyal; he respects the rich; they are rich for the sake of his imagination; how poor his fancy would be, if they were not rich! That they have some high-fenced grove which they call a park; that they live in larger and better-garnished saloons than

Nature

he has visited, and go in coaches, keeping only the society of the elegant, to watering-places and to distant cities,—these make the groundwork from which he has delineated estates of romance, compared with which their actual possessions are shanties and paddocks. The muse herself betrays her son, and enhances the gifts of wealth and well-born beauty by a radiation out of the air, and clouds, and forests that skirt the road,—a certain haughty favor, as if from patrician genii to patricians, a kind of aristocracy in nature, a prince of the power of the air.

The moral sensibility which makes Edens and Tempes so easily, may not be always found, but the material landscape is never far off. We can find these enchantments without visiting the Como Lake, or the Madeira Islands. We exaggerate the praises of local scenery. In every landscape the point of astonishment is the meeting of the sky and the earth, and that is seen from the first hillock as well as from the top of the Alleghanies. The stars at night stoop down over the brownest, homeliest common with all the spiritual magnificence which they shed on the Campagna, or on the marble deserts of Egypt. The uprolled clouds and the colors of morning and evening will transfigure maples and alders. The difference between landscape and landscape is small, but there is great difference in the beholders. There is

Emerson

nothing so wonderful in any particular landscape as the necessity of being beautiful under which every landscape lies. Nature cannot be surprised in undress. Beauty breaks in everywhere.

But it is very easy to outrun the sympathy of readers on this topic, which schoolmen called *natura naturata*, or nature passive. One can hardly speak directly of it without excess. It is as easy to broach in mixed companies what is called "the subject of religion." A susceptible person does not like to indulge his tastes in this kind without the apology of some trivial necessity: he goes to see a wood-lot, or to look at the crops, or to fetch a plant or a mineral from a remote locality, or he carries a fowling-piece or a fishing-rod. I suppose this shame must have a good reason. A dilettantism in nature is barren and unworthy. The fop of fields is no better than his brother of Broadway. Men are naturally hunters and inquisitive of wood-craft, and I suppose that such a gazetteer as wood-cutters and Indians should furnish facts for, would take place in the most sumptuous drawing-rooms of all the "Wreaths" and "Flora's chaplets" of the bookshops; yet ordinarily, whether we are too clumsy for so subtle a topic, or from whatever cause, as soon as men begin to write on nature, they fall into euphuism. Frivolity is a most unfit tribute to Pan, who

Nature

ought to be represented in the mythology as the most continent of gods. I would not be frivolous before the admirable reserve and prudence of time, yet I cannot renounce the right of returning often to this old topic. The multitude of false churches accredits the true religion. Literature, poetry, science are the homage of man to this unfathomed secret, concerning which no sane man can affect an indifference or incuriosity. Nature is loved by what is best in us. It is loved as the city of God, although, or rather because there is no citizen. The sunset is unlike anything that is underneath it: it wants men. And the beauty of nature must always seem unreal and mocking, until the landscape has human figures that are as good as itself. If there were good men, there would never be this rapture in nature. If the king is in the palace, nobody looks at the walls. It is when he is gone, and the house is filled with grooms and gazers, that we turn from the people to find relief in the majestic men that are suggested by the pictures and the architecture. The critics who complain of the sickly separation of the beauty of nature from the thing to be done, must consider that our hunting of the picturesque is inseparable from our protest against false society. Man is fallen; nature is erect, and serves as a differential thermometer, detecting the presence or absence of the divine sentiment

Emerson

in man. By fault of our dulness and selfishness we are looking up to nature, but when we are convalescent, nature will look up to us. We see the foaming brook with compunction: if our own life flowed with the right energy, we should shame the brook. The stream of zeal sparkles with real fire, and not with reflex rays of sun and moon. Nature may be as selfishly studied as trade. Astronomy to the selfish becomes astrology; psychology, mesmerism (with intent to show where our spoons are gone); and anatomy and physiology become phrenology and palmistry.

But taking timely warning, and leaving many things unsaid on this topic, let us no longer omit our homage to the Efficient Nature, *natura naturans*, the quick cause before which all forms flee as the driven snows; itself secret, its works driven before it in flocks and multitudes, (as the ancients represented nature by Proteus, a shepherd,) and in undescribable variety. It publishes itself in creatures, reaching from particles and spiculæ through transformation on transformation to the highest symmetries, arriving at consummate results without a shock or a leap. A little heat, that is a little motion, is all that differences the bald, dazzling white and deadly cold poles of the earth from the prolific tropical climates. All changes pass without violence, by reason of

Nature

the two cardinal conditions of boundless space and boundless time. Geology has initiated us into the secularity of nature, and taught us to disuse our dame-school measures, and exchange our Mosaic and Ptolemaic schemes for her large style. We knew nothing rightly, for want of perspective. Now we learn what patient periods must round themselves before the rock is formed; then before the rock is broken, and the first lichen race has disintegrated the thinnest external plate into soil, and opened the door for the remote Flora, Fauna, Ceres, and Pomona to come in. How far off yet is the trilobite! how far the quadruped! how inconceivably remote is man! All duly arrive, and then race after race of men. It is a long way from granite to the oyster; farther yet to Plato and the preaching of the immortality of the soul. Yet all must come, as surely as the first atom has two sides.

Motion or change and identity or rest are the first and second secrets of nature:—Motion and Rest. The whole code of her laws may be written on the thumbnail, or the signet of a ring. The whirling bubble on the surface of a brook admits us to the secret of the mechanics of the sky. Every shell on the beach is a key to it. A little water made to rotate in a cup explains the formation of the simpler shells; the addition of matter from year to year arrives at

Emerson

last at the most complex forms; and yet so poor is nature with all her craft, that from the beginning to the end of the universe she has but one stuff,—but one stuff with its two ends, to serve up all her dream-like variety. Compound it how she will, star, sand, fire, water, tree, man, it is still one stuff, and betrays the same properties.

Nature is always consistent, though she feigns to contravene her own laws. She keeps her laws, and seems to transcend them. She arms and equips an animal to find its place and living in the earth, and at the same time she arms and equips another animal to destroy it. Space exists to divide creatures; but by clothing the sides of a bird with a few feathers she gives him a petty omnipresence. The direction is forever onward, but the artist still goes back for materials and begins again with the first elements on the most advanced stage: otherwise all goes to ruin. If we look at her work, we seem to catch a glance of a system in transition. Plants are the young of the world, vessels of health and vigor; but they grope ever upward toward consciousness; the trees are imperfect men, and seem to bemoan their imprisonment, rooted in the ground. The animal is the novice and probationer of a more advanced order. The men, though young, having tasted the first drop from the cup of thought, are already

Nature

dissipated: the maples and ferns are still uncorrupt; yet no doubt when they come to consciousness they too will curse and swear. Flowers so strictly belong to youth that we adult men soon come to feel that their beautiful generations concern not us: we have had our day; now let the children have theirs. The flowers jilt us, and we are old bachelors with our ridiculous tenderness.

Things are so strictly related, that according to the skill of the eye, from any one object the parts and properties of any other may be predicted. If we had eyes to see it, a bit of stone from the city wall would certify us of the necessity that man must exist, as readily as the city. That identity makes us all one, and reduces to nothing great intervals on our customary scale. We talk of deviations from natural life, as if artificial life were not also natural. The smoothest curled courtier in the boudoirs of a palace has an animal nature, rude and aboriginal as a white bear, omnipotent to its own ends, and is directly related, there amid essences and billets-doux, to Himmaleh mountain-chains and the axis of the globe. If we consider how much we are nature's, we need not be superstitious about towns, as if that terrific or benefic force did not find us there also, and fashion cities. Nature, who made the mason, made the house. We may easily hear too much of rural influences. The cool

Emerson

disengaged air of natural objects makes them enviable to us, chafed and irritable creatures with red faces, and we think we shall be as grand as they if we camp out and eat roots; but let us be men instead of woodchucks and the oak and the elm shall gladly serve us, though we sit in chairs of ivory on carpets of silk.

This guiding identity runs through all the surprises and contrasts of the piece, and characterizes every law. Man carries the world in his head, the whole astronomy and chemistry suspended in a thought. Because the history of nature is characterized in his brain, therefore is he the prophet and discoverer of her secrets. Every known fact in natural science was divined by the presentiment of somebody, before it was actually verified. A man does not tie his shoe without recognizing laws which bind the farthest regions of nature: moon, plant, gas, crystal, are concrete geometry and numbers. Common sense knows its own, and recognizes the fact at first sight in chemical experiment. The common sense of Franklin, Dalton, Davy and Black, is the same common sense which made the arrangements which now it discovers.

If the identity expresses organized rest, the counter action runs also into organization. The astronomers said, "Give us matter and a little motion and we will construct the uni-

Nature

verse. It is not enough that we should have matter, we must also have a single impulse, one shove to launch the mass and generate the harmony of the centrifugal and centripetal forces. Once heave the ball from the hand, and we can show how all this mighty order grew."—"A very unreasonable postulate," said the metaphysicians, "and a plain begging of the question. Could you not prevail to know the genesis of projection, as well as the continuation of it?" Nature, meanwhile, had not waited for the discussion, but, right or wrong, bestowed the impulse, and the balls rolled. It was no great affair, a mere push, but the astronomers were right in making much of it, for there is no end to the consequences of the act. That famous aboriginal push propagates itself through all the balls of the system, and through every atom of every ball; through all the races of creatures, and through the history and performances of every individual. Exaggeration is in the course of things. Nature sends no creature, no man into the world without adding a small excess of his proper quality. Given the planet it is still necessary to add the impulse; so to every creature nature added a little violence of direction in its proper path, a shove to put it on its way; in every instance a slight generosity, a drop too much. Without electricity the air would rot, and

Emerson

without this violence of direction which men and women have, without a spice of bigot and fanatic, no excitement, no efficiency. We aim above the mark to hit the mark. Every act hath some falsehood of exaggeration in it. And when now and then comes along some sad, sharp-eyed man, who sees how paltry a game is played, and refuses to play but blabs the secret;—how then? Is the bird flown? O no, the wary Nature sends a new troop of fairer forms, of lordlier youths, with a little more excess of direction to hold them fast to their several aim; makes them a little wrong-headed in that direction in which they are rightest, and on goes the game again with new whirl, for a generation or two more. The child with his sweet pranks, the fool of his senses, commanded by every sight and sound, without any power to compare and rank his sensations, abandoned to a whistle or a painted chip, to a lead dragoon or a gingerbread-dog, individualizing everything, generalizing nothing, delighted with every new thing, lies down at night overpowered by the fatigue which this day of continual pretty madness has incurred. But nature has answered her purpose with the curly, dimpled lunatic. She has tasked every faculty, and has secured the symmetrical growth of the bodily frame by all these attitudes and exertions,—an end of the first importance, which could not be trusted to

Nature

any care less perfect than her own. This glitter, this opaline lustre plays round the top of every toy to his eye to insure his fidelity, and he is deceived to his good. We are made alive and kept alive by the same arts. Let the stoics say what they please, we do not eat for the good of living, but because the meat is savory and the appetite is keen. The vegetable life does not content itself with casting from the flower or the tree a single seed, but it fills the air and earth with a prodigality of seeds, that, if thousands perish, thousands may plant themselves; that hundreds may come up, that tens may live to maturity; that at least one may replace the parent. All things betray the same calculated profusion. The excess of fear with which the animal frame is hedged round, shrinking from cold, starting at sight of a snake or at a sudden noise, protects us, through a multitude of groundless alarms, from some one real danger at last. The lover seeks in marriage his private felicity and perfection, with no prospective end; and nature hides in his happiness her own end, namely progeny, or the perpetuity of the race.

But the craft with which the world is made, runs also into the mind and character of men. No man is quite sane; each has a vein of folly in his composition, a slight determination of blood to the head, to make

Emerson

sure of holding him hard to some one point which nature had taken to heart. Great causes are never tried on their merits; but the cause is reduced to particulars to suit the size of the partisans, and the contention is ever hottest on minor matters. Not less remarkable is the overfaith of each man in the importance of what he has to do or say. The poet, the prophet, has a higher value for what he utters than any hearer, and therefore it gets spoken. The strong, self-complacent Luther declares with an emphasis not to be mistaken, that "God himself cannot do without wise men." Jacob Behmen and George Fox betray their egotism in the pertinacity of their controversial tracts, and James Naylor once suffered himself to be worshipped as the Christ. Each prophet comes presently to identify himself with his thought, and to esteem his hat and shoes sacred. However this may discredit such persons with the judicious, it helps them with the people, as it gives heat, pungency, and publicity to their words. A similar experience is not infrequent in private life. Each young and ardent person writes a diary, in which, when the hours of prayer and penitence arrive, he inscribes his soul. The pages thus written are to him burning and fragrant; he reads them on his knees by midnight and by the morning star; he wets them with his tears; they are sacred; too

Nature

good for the world, and hardly yet to be shown to the dearest friend. This is the manchild that is born to the soul, and her life still circulates in the babe. The umbilical cord has not yet been cut. After some time has elapsed, he begins to wish to admit his friend to this hallowed experience, and with hesitation, yet with firmness, exposes the pages to his eye. Will they not burn his eyes? The friend coldly turns them over, and passes from the writing to conversation, with easy transition, which strikes the other party with astonishment and vexation. He cannot suspect the writing itself. Days and nights of fervid life, of communion with angels of darkness and of light have engraved their shadowy characters on that tear-stained book. He suspects the intelligence or the heart of his friend. Is there then no friend? He cannot yet credit that one may have impressive experience and yet may not know how to put his private fact into literature: and perhaps the discovery that wisdom has other tongues and ministers than we, that though we should hold our peace the truth would not the less be spoken, might check injuriously the flames of our zeal. A man can only speak so long as he does not feel his speech to be partial and inadequate. It is partial, but he does not see it to be so whilst he utters it. As soon as he is released from the instinctive and particular and sees

Emerson

its partiality, he shuts his mouth in disgust. For no man can write anything who does not think that what he writes is for the time the history of the world; or do anything well who does not esteem his work to be of importance. My work may be of none, but I must not think it of none, or I shall not do it with impunity.

In like manner there is throughout nature something mocking, something that leads us on and on, but arrives nowhere; keeps no faith with us. All promise outruns the performance. We live in a system of approximations. Every end is prospective of some other end, which is also temporary; a round and final success nowhere. We are encamped in nature, not domesticated. Hunger and thirst lead us on to eat and to drink; but bread and wine, mix and cook them how you will, leave us hungry and thirsty, after the stomach is full. It is the same with all our arts and performances. Our music, our poetry, our language itself are not satisfactions, but suggestions. The hunger for wealth, which reduces the planet to a garden, fools the eager pursuer. What is the end sought? Plainly to secure the ends of good sense and beauty from the intrusion of deformity or vulgarity of any kind. But what an operose method! What a train of means to secure a little conversation! This palace of brick and stone, these servants, this kitch-

Nature

en, these stables, horses and equipage, this bank-stock and file of mortgages; trade to all the world, country-house and cottage by the waterside, all for a little conversation, high, clear, and spiritual! Could it not be had as well by beggars on the highway? No, all these things came from successive efforts of these beggars to remove friction from the wheels of life, and give opportunity. Conversation, character, were the avowed ends; wealth was good as it appeased the animal cravings, cured the smoky chimney, silenced the creaking door, brought friends together in a warm and quiet room, and kept the children and the dinner-table in a different apartment. Thought, virtue, beauty, were the ends; but it was known that men of thought and virtue sometimes had the headache, or wet feet, or could lose good time whilst the room was getting warm in winter days. Unluckily, in the exertions necessary to remove these inconveniences, the main attention has been diverted to this object; the old aims have been lost sight of, and to remove friction has come to be the end. That is the ridicule of rich men; and Boston, London, Vienna, and now the governments generally of the world are cities and governments of the rich; and the masses are not men, but *poor men*, that is, men who would be rich; this is the ridicule of the class, that they arrive with pains and sweat and

Emerson

fury nowhere; when all is done, it is for nothing. They are like one who has interrupted the conversation of a company to make his speech, and now has forgotten what he went to say. The appearance strikes the eye everywhere of an aimless society, of aimless nations. Were the ends of nature so great and cogent as to exact this immense sacrifice of men?

Quite analogous to the deceits in life, there is, as might be expected, a similar effect on the eye from the face of external nature. There is in woods and waters a certain enticement and flattery, together with a failure to yield a present satisfaction. This disappointment is felt in every landscape. I have seen the softness and beauty of the summer clouds floating feathery overhead, enjoying, as it seemed, their height and privilege of motion, whilst yet they appeared not so much the drapery of this place and hour, as forelooking to some pavilions and gardens of festivity beyond. It is an odd jealousy, but the poet finds himself not near enough to his object. The pine-tree, the river, the bank of flowers before him does not seem to be nature. Nature is still elsewhere. This or this is but outskirts and far-off reflection and echo of the triumph that has passed by and is now at its glancing splendor and heyday, perchance in the neighboring fields, or, if you stand in the field, then in the adjacent woods.

Nature

The present object shall give you this sense of stillness that follows a pageant which has just gone by. What splendid distance, what recesses of ineffable pomp and loveliness in the sunset! But who can go where they are, or lay his hand or plant his foot thereon? Off they fall from the round world forever and ever. It is the same among the men and women as among the silent trees; always a referred existence, an absence, never a presence and satisfaction. Is it that beauty can never be grasped? in persons and in landscape is equally inaccessible? The accepted and betrothed lover has lost the wildest charm of his maiden in her acceptance of him. She was heaven whilst he pursued her as a star: she cannot be heaven if she stoops to such a one as he.

What shall we say of this omnipresent appearance of that first projectile impulse, of this flattery and balking of so many well-meaning creatures? Must we not suppose somewhere in the universe a slight treachery and derision? Are we not engaged to a serious resentment of this use that is made of us? Are we tickled trout, and fools of nature? One look at the face of heaven and earth lays all petulance at rest, and soothes us to wiser convictions. To the intelligent nature converts itself into a vast promise, and will not be rashly explained. Her secret is untold. Many and many an Œdipus ar-

Emerson

rives; he has the whole mystery teeming in his brain. Alas! the same sorcery has spoiled his skill; no syllable can he shape on his lips. Her mighty orbit vaults like the fresh rainbow into the deep, but no archangel's wing was yet strong enough to follow it and report of the return of the curve. But it also appears that our actions are seconded and disposed to greater conclusions than we designed. We are escorted on every hand through life by spiritual agents, and a beneficent purpose lies in wait for us. We cannot bandy words with Nature, or deal with her as we deal with persons. If we measure our individual forces against hers we may easily feel as if we were the sport of an insuperable destiny. But if, instead of identifying ourselves with the work, we feel that the soul of the workman streams through us we shall find the peace of the morning dwelling first in our hearts, and the fathomless powers of gravity and chemistry, and, over them, of life, preëxisting within us in their highest form.

The uneasiness which the thought of our helplessness in the chain of causes occasions us, results from looking too much at one condition of nature, namely, Motion. But the drag is never taken from the wheel. Wherever the impulse exceeds, the Rest or Identity insinuates its compensation. All over the wide fields of earth grows the prunella or

Nature

self-heal. After every foolish day we sleep off the fumes and furies of its hours; and though we are always engaged with particulars, and often enslaved to them, we bring with us to every experiment the innate universal laws. These, while they exist in the mind as ideas, stand around us in nature forever embodied, a present sanity to expose and cure the insanity of men. Our servitude to particulars betrays us into a hundred foolish expectations. We anticipate a new era from the invention of a locomotive, or a balloon; the new engine brings with it the old checks. They say that by electro-magnetism your salad shall be grown from the seed whilst your fowl is roasting for dinner; it is a symbol of our modern aims and endeavors, of our condensation and acceleration of objects;—but nothing is gained; nature cannot be cheated; man's life is but seventy salads long, grow they swift or grow they slow. In these checks and impossibilities however we find our advantage, not less than in the impulses. Let the victory fall where it will, we are on that side. And the knowledge that we traverse the whole scale of being, from the centre to the poles of nature, and have some stake in every possibility, lends that sublime lustre to death, which philosophy and religion have too outwardly and literally striven to express in the popular doctrine of the immortality of the

Emerson

soul. The reality is more excellent than the report. Here is no ruin, no discontinuity, no spent ball. The divine circulations never rest nor linger. Nature is the incarnation of a thought, and turns to a thought again, as ice becomes water and gas. The world is mind precipitated, and the volatile essence is forever escaping again into the state of free thought. Hence the virtue and pungency of the influence on the mind of natural objects, whether inorganic or organized. Man imprisoned, man crystallized, man vegetative, speaks to man impersonated. That power which does not respect quantity, which makes the whole and the particle its equal channel, delegates its smile to the morning, and distils its essence into every drop of rain. Every moment instructs, and every object; for wisdom is infused into every form. It has been poured into us as blood; it convulsed us as pain; it slid into us as pleasure; it enveloped us in dull, melancholy days, or in days of cheerful labor; we did not guess its essence until after a long time.

Spiritual Laws

SPIRITUAL LAWS.

WHEN the act of reflection takes place in the mind, when we look at ourselves in the light of thought, we discover that our life is embosomed in beauty. Behind us, as we go, all things assume pleasing forms, as clouds do far off. Not only things familiar and stale, but even the tragic and terrible are comely as they take their place in the pictures of memory. The river-bank, the weed at the water-side, the old house, the foolish person, however neglected in the passing, have a grace in the past. Even the corpse that has lain in the chambers has added a solemn ornament to the house. The soul will not know either deformity or pain. If in the hours of clear reason we should speak the severest truth, we should say that we had never made a sacrifice. In these hours the mind seems so great that nothing can be taken from us that seems much. All loss, all pain, is particular; the universe remains to the heart unhurt. Neither vexations nor calamities abate our trust. No man ever stated his griefs as lightly as he might. Allow for exaggeration in the most patient and sorely ridden hack that ever was driven.

Emerson

For it is only the finite that has wrought and suffered; the infinite lies stretched in smiling repose.

The intellectual life may be kept clean and healthful if man will live the life of nature and not import into his mind difficulties which are none of his. No man need be perplexed in his speculations. Let him do and say what strictly belongs to him, and though very ignorant of books, his nature shall not yield him any intellectual obstructions and doubts. Our young people are diseased with the theological problems of original sin, origin of evil, predestination and the like. These never presented a practical difficulty to any man,—never darkened across any man's road who did not go out of his way to seek them. These are the soul's mumps and measles and whooping-coughs, and those who have not caught them cannot describe their health or prescribe the cure. A simple mind will not know these enemies. It is quite another thing that he should be able to give account of his faith and expound to another the theory of his self-union and freedom. This requires rare gifts. Yet without this self-knowledge there may be a sylvan strength and integrity in that which he is. "A few strong instincts and a few plain rules" suffice us.

My will never gave the images in my mind the rank they now take. The regular course

Spiritual Laws

of studies, the years of academical and professional education have not yielded me better facts than some idle books under the bench at the Latin School. What we do not call education is more precious than that which we call so. We form no guess, at the time of receiving a thought, of its comparative value. And education often wastes its effort in attempts to thwart and balk this natural magnetism, which is sure to select what belongs to it.

In like manner our moral nature is vitiated by any interference of our will. People represent virtue as a struggle, and take to themselves great airs upon their attainments, and the question is everywhere vexed when a noble nature is commended, whether the man is not better who strives with temptation. But there is no merit in the matter. Either God is there or he is not there. We love characters in proportion as they are impulsive and spontaneous. The less a man thinks or knows about his virtues the better we like him. Timoleon's victories are the best victories, which ran and flowed like Homer's verses, Plutarch said. When we see a soul whose acts are all regal, graceful and pleasant as roses, we must thank God that such things can be and are, and not turn sourly on the angel and say "Crump is a better man with his grunting resistance to all his native devils."

Emerson

Not less conspicuous is the preponderance of nature over will in all practical life. There is less intention in history than we ascribe to it. We impute deep-laid far-sighted plans to Cæsar and Napoleon; but the best of their power was in nature, not in them. Men of an extraordinary success, in their honest moments, have always sung "Not unto us, not unto us." According to the faith of their times they have built altars to Fortune, or to Destiny, or to St. Julian. Their success lay in their parallelism to the course of thought, which found in them an unobstructed channel; and the wonders of which they were the visible conductors seemed to the eye their deed. Did the wires generate the galvanism? It is even true that there was less in them on which they could reflect than in another; as the virtue of a pipe is to be smooth and hollow. That which externally seemed will and immovableness was willingness and self-annihilation. Could Shakspeare give a theory of Shakspeare? Could ever a man of prodigious mathematical genius convey to others any insight into his methods? If he could communicate that secret it would instantly lose its exaggerated value, blending with the daylight and the vital energy the power to stand and to go.

The lesson is forcibly taught by these observations that our life might be much easier and simpler than we make it; that the world

Spiritual Laws

might be a happier place than it is; that there is no need of struggles, convulsions, and despairs, of the wringing of the hands and the gnashing of the teeth; that we miscreate our own evils. We interfere with the optimism of nature; for whenever we get this vantage-ground of the past, or of a wiser mind in the present, we are able to discern that we are begirt with laws which execute themselves.

The face of external nature teaches the same lesson. Nature will not have us fret and fume. She does not like our benevolence or our learning much better than she likes our frauds and wars. When we come out of the caucus, or the bank, or the Abolition-convention, or the Temperance-meeting, or the Transcendental club into the fields and woods, she says to us, "So hot? my little Sir."

We are full of mechanical actions. We must needs intermeddle and have things in our own way, until the sacrifices and virtues of society are odious. Love should make joy; but our benevolence is unhappy. Our Sunday-schools and churches and pauper-societies are yokes to the neck. We pain ourselves to please nobody. There are natural ways of arriving at the same ends at which these aim, but do not arrive. Why should all virtue work in one and the same way? Why should all give dollars? It is very in-

Emerson

convenient to us country folk, and we do not think any good will come of it. We have not dollars, merchants have; let them give them. Farmers will give corn; poets will sing; women will sew; laborers will lend a hand; the children will bring flowers. And why drag this dead weight of a Sunday-school over the whole Christendom? It is natural and beautiful that childhood should inquire and maturity should teach; but it is time enough to answer questions when they are asked. Do not shut up the young people against their will in a pew and force the children to ask them questions for an hour against their will.

If we look wider, things are all alike; laws and letters and creeds and modes of living seem a travesty of truth. Our society is encumbered by ponderous machinery, which resembles the endless aqueducts which the Romans built over hill and dale and which are superseded by the discovery of the law that water rises to the level of its source. It is a Chinese wall which any nimble Tartar can leap over. It is a standing army, not so good as a peace. It is a graduated, titled, richly appointed empire, quite superfluous when town-meetings are found to answer just as well.

Let us draw a lesson from nature, which always works by short ways. When the fruit is ripe, it falls. When the fruit is des-

Spiritual Laws

patched, the leaf falls. The circuit of the waters is mere falling. The walking of man and all animals is a falling forward. All our manual labor and works of strength, as prying, splitting, digging, rowing and so forth, are done by dint of continual falling, and the globe, earth, moon, comet, sun, star, fall forever and ever.

The simplicity of the universe is very different from the simplicity of a machine. He who sees moral nature out and out and thoroughly knows how knowledge is acquired and character formed, is a pedant. The simplicity of nature is not that which may easily be read, but is inexhaustible. The last analysis can no wise be made. We judge of a man's wisdom by his hope, knowing that the perception of the inexhaustibleness of nature is an immortal youth. The wild fertility of nature is felt in comparing our rigid names and reputations with our fluid consciousness. We pass in the world for sects and schools, for erudition and piety, and we are all the time jejune babes. One sees very well how Pyrrhonism grew up. Every man sees that he is that middle point whereof every thing may be affirmed and denied with equal reason. He is old, he is young, he is very wise, he is altogether ignorant. He hears and feels what you say of the seraphim, and of the tin-peddler. There is no permanent wise man except in the figment of

Emerson

the Stoics. We side with the hero, as we read or paint, against the coward and the robber; but we have been ourselves that coward and robber, and shall be again,—not in the low circumstance, but in comparison with the grandeurs possible to the soul.

A little consideration of what takes place around us every day would show us that a higher law than that of our will regulates events; that our painful labors are unnecessary and fruitless; that only in our easy, simple, spontaneous action are we strong, and by contenting ourselves with obedience we become divine. Belief and love,—a believing love will relieve us of a vast load of care. O my brothers, God exists. There is a soul at the centre of nature and over the will of every man, so that none of us can wrong the universe. It has so infused its strong enchantment into nature that we prosper when we accept its advice, and when we struggle to wound its creatures our hands are glued to our sides, or they beat our own breasts. The whole course of things goes to teach us faith. We need only obey. There is guidance for each of us, and by lowly listening we shall hear the right word. Why need you choose so painfully your place and occupation and associates and modes of action and of entertainment? Certainly there is a possible right for you that precludes the need of balance and wilful election.

Spiritual Laws

For you there is a reality, a fit place and congenial duties. Place yourself in the middle of the stream of power and wisdom which animates all whom it floats, and you are without effort impelled to truth, to right and a perfect contentment. Then you put all gainsayers in the wrong. Then you are the world, the measure of right, of truth, of beauty. If we would not be mar-plots with our miserable interferences, the work, the society, letters, arts, science, religion of men would go on far better than now, and the heaven predicted from the beginning of the world, and still predicted from the bottom of the heart, would organize itself, as do now the rose and the air and the sun.

I say, *do not choose*; but that is a figure of speech by which I would distinguish what is commonly called *choice* among men, and which is a partial act, the choice of the hands, of the eyes, of the appetites, and not a whole act of the man. But that which I call right or goodness, is the choice of my constitution; and that which I call heaven, and inwardly aspire after, is the state or circumstance desirable to my constitution; and the action which I in all my years tend to do, is the work for my faculties. We must hold a man amenable to reason for the choice of his daily craft or profession. It is not an excuse any longer for his deeds that they are the custom of his trade. What business has he

Emerson

with an evil trade? Has he not a *calling* in his character?

Each man has his own vocation. The talent is the call. There is one direction in which all space is open to him. He has faculties silently inviting him thither to endless exertion. He is like a ship in a river; he runs against obstructions on every side but one, on that side all obstruction is taken away and he sweeps serenely over a deepening channel into an infinite sea. This talent and this call depend on his organization, or the mode in which the general soul incarnates itself in him. He inclines to do something which is easy to him and good when it is done, but which no other man can do. He has no rival. For the more truly he consults his own powers, the more difference will his work exhibit from the work of any other. His ambition is exactly proportioned to his powers. The height of the pinnacle is determined by the breadth of the base. Every man has this call of the power to do somewhat unique, and no man has any other call. The pretence that he has another call, a summons by name and personal election and outward "signs that mark him extraordinary and not in the roll of common men," is fanaticism, and betrays obtuseness to perceive that there is one mind in all the individuals, and no respect of persons therein.

Spiritual Laws

By doing his work he makes the need felt which he can supply, and creates the taste by which he is enjoyed. By doing his own work he unfolds himself. It is the vice of our public speaking that it has not abandonment. Somewhere, not only every orator but every man should let out all the length of all the reins; should find or make a frank and hearty expression of what force and meaning is in him. The common experience is that the man fits himself as well as he can to the customary details of that work or trade he falls into, and tends it as a dog turns a spit. Then is he a part of the machine he moves; the man is lost. Until he can manage to communicate himself to others in his full stature and proportion, he does not yet find his vocation. He must find in that an outlet for his character, so that he may justify his work to their eyes. If the labor is mean, let him by his thinking and character make it liberal. Whatever he knows and thinks, whatever in his apprehension is worth doing, that let him communicate, or men will never know and honor him aright. Foolish, whenever you take the meanness and formality of that thing you do, instead of converting it into the obedient spiracle of your character and aims.

We like only such actions as have already long had the praise of men, and do not perceive that anything man can do may be

Emerson

divinely done. We think greatness entailed or organized in some places or duties, in certain offices or occasions, and do not see that Paganini can extract rapture from a catgut, and Eulenstein from a jews-harp, and a nimble-fingered lad out of shreds of paper with his scissors, and Landseer out of swine, and the hero out of the pitiful habitation and company in which he was hidden. What we call obscure condition or vulgar society is that condition and society whose poetry is not yet written, but which you shall presently make as enviable and renowned as any. In our estimates let us take a lesson from kings. The parts of hospitality, the connection of families, the impressiveness of death, and a thousand other things, royalty makes its own estimate of, and a royal mind will. To make habitually a new estimate,—that is elevation.

What a man does, that he has. What has he to do with hope or fear? In himself is his might. Let him regard no good as solid but that which is in his nature and which must grow out of him as long as he exists. The goods of fortune may come and go like summer leaves; let him scatter them on every wind as the momentary signs of his infinite productiveness.

He may have his own. A man's genius, the quality that differences him from every other, the susceptibility to one class of in-

Spiritual Laws

fluences, the selection of what is fit for him, the rejection of what is unfit, determines for him the character of the universe. A man is a method, a progressive arrangement; a selecting principle, gathering his like to him wherever he goes. He takes only his own out of the multiplicity that sweeps and circles round him. He is like one of those booms which are set out from the shore on rivers to catch drift-wood, or like the load-stone amongst splinters of steel. Those facts, words, persons, which dwell in his memory without his being able to say why, remain because they have a relation to him not less real for being as yet unapprehended. They are symbols of value to him as they can interpret parts of his consciousness which he would vainly seek words for in the conventional images of books and other minds. What attracts my attention shall have it, as I will go to the man who knocks at my door, whilst a thousand persons as worthy go by it, to whom I give no regard. It is enough that these particulars speak to me. A few anecdotes, a few traits of character, manners, face, a few incidents, have an emphasis in your memory out of all proportion to their apparent significance if you measure them by the ordinary standards. They relate to your gift. Let them have their weight, and do not reject them and cast about for illustration and facts more

Emerson

usual in literature. What your heart thinks great, is great. The soul's emphasis is always right.

Over all things that are agreeable to his nature and genius the man has the highest right. Everywhere he may take what belongs to his spiritual estate, nor can he take anything else though all doors were open, nor can all the force of men hinder him from taking so much. It is vain to attempt to keep a secret from one who has a right to know it. It will tell itself. That mood into which a friend can bring us is his dominion over us. To the thoughts of that state of mind he has a right. All the secrets of that state of mind he can compel. This is a law which statesmen use in practice. All the terrors of the French Republic, which held Austria in awe, were unable to command her diplomacy. But Napoleon sent to Vienna M. de Narbonne, one of the old noblesse, with the morals, manners and name of that interest, saying that it was indispensable to send to the old aristocracy of Europe men of the same connection, which in fact constitutes a sort of free-masonry. M. de Narbonne in less than a fortnight penetrated all the secrets of the imperial cabinet.

Nothing seems so easy as to speak and to be understood. Yet a man may come to find *that* the strongest of defences and of ties,—that he has been understood; and he who

Spiritual Laws

has received an opinion may come to find it the most inconvenient of bonds.

If a teacher have any opinion which he wishes to conceal, his pupils will become as fully indoctrinated into that as into any which he publishes. If you pour water into a vessel twisted into coils and angles, it is vain to say, I will pour it only into this or that;—it will find its level in all. Men feel and act the consequences of your doctrine without being able to show how they follow. Show us an arc of the curve, and a good mathematician will find out the whole figure. We are always reasoning from the seen to the unseen. Hence the perfect intelligence that subsists between wise men of remote ages. A man cannot bury his meanings so deep in his book but time and like-minded men will find them. Plato had a secret doctrine, had he? What secret can he conceal from the eyes of Bacon? of Montaigne? of Kant? Therefore Aristotle said of his works, "They are published and not published."

No man can learn what he has not preparation for learning, however near to his eyes is the object. A chemist may tell his most precious secrets to a carpenter, and he shall be never the wiser,—the secrets he would not utter to a chemist for an estate. God screens us evermore from premature ideas. Our eyes are holden that we cannot see things that stare us in the face, until the hour arrives

when the mind is ripened; then we behold them, and the time when we saw them not is like a dream.

Not in nature but in man is all the beauty and worth he sees. The world is very empty, and is indebted to this gilding, exalting soul for all its pride. "Earth fills her lap with splendors" *not* her own. The vale of Tempe, Tivoli and Rome are earth and water, rocks and sky. There are as good earth and water in a thousand places, yet how unaffecting!

People are not the better for the sun and moon, the horizon and the trees; as it is not observed that the keepers of Roman galleries or the valets of painters have any elevation of thought, or that librarians are wiser men than others. There are graces in the demeanor of a polished and noble person which are lost upon the eye of a churl. These are like the stars whose light has not yet reached us.

He may see what he maketh. Our dreams are the sequel of our waking knowledge. The visions of the night bear some proportion to the visions of the day. Hideous dreams are exaggerations of the sins of the day. We see our evil affections embodied in bad physiognomies. On the Alps the traveller sometimes beholds his own shadow magnified to a giant, so that every gesture of his hand is terrific. "My children," said an old man to his boys scared by a figure in the dark entry,

Spiritual Laws

"My children, you will never see anything worse than yourselves." As in dreams, so in the scarcely less fluid events of the world every man sees himself in colossal, without knowing that it is himself. The good, compared to the evil which he sees, is as his own good to his own evil. Every quality of his mind is magnified in some one acquaintance, and every emotion of his heart in some one. He is like a quincunx of trees, which counts five,—east, west, north, or south; or an initial, medial, and terminal acrostic. And why not? He cleaves to one person and avoids another, according to their likeness or unlikeness to himself, truly seeking himself in his associates and moreover in his trade and habits and gestures and meats and drinks, and comes at last to be faithfully represented by every view you take of his circumstances.

He may read what he writes. What can we see or acquire but what we are? You have observed a skilful man reading Virgil. Well, that author is a thousand books to a thousand persons. Take the book into your two hands and read your eyes out, you will never find what I find. If any ingenious reader would have a monopoly of the wisdom or delight he gets, he is as secure now the book is Englished, as if it were imprisoned in the Pelews' tongue. It is with a good book as it is with good company. Introduce a base person among gentlemen, it

Emerson

is all to no purpose; he is not their fellow. Every society protects itself. The company is perfectly safe, and he is not one of them, though his body is in the room.

What avails it to fight with the eternal laws of mind, which adjust the relation of all persons to each other by the mathematical measure of their havings and beings? Gertrude is enamored of Guy; how high, how aristocratic, how Roman his mien and manners! to live with him were life indeed, and no purchase is too great; and heaven and earth are moved to that end. Well, Gertrude has Guy; but what now avails how high, how aristocratic, how Roman his mien and manners, if his heart and aims are in the senate, in the theatre and in the billiard-room, and she has no aims, no conversation that can enchant her graceful lord?

He shall have his own society. We can love nothing but nature. The most wonderful talents, the most meritorious exertions really avail very little with us; but nearness or likeness of nature,—how beautiful is the ease of its victory! Persons approach us, farous for their beauty, for their accomplishments, worthy of all wonder for their charms and gifts; they dedicate their whole skill to the hour and the company,—with very imperfect result. To be sure it would be ungrateful in us not to praise them loudly. Then, when all is done, a person of related

Spiritual Laws

mind, a brother or sister by nature, comes to us so softly and easily, so nearly and intimately, as if it were the blood in our proper veins, that we feel as if some one was gone, instead of another having come; we are utterly relieved and refreshed; it is a sort of joyful solitude. We foolishly think in our days of sin that we must court friends by compliance to the customs of society, to its dress, its breeding, and its estimates. But only that soul can be my friend which I encounter on the line of my own march, that soul to which I do not decline and which does not decline to me, but, native of the same celestial latitude, repeats in its own all my experience. The scholar forgets himself and apes the customs and costumes of the man of the world to deserve the smile of beauty, and follows some giddy girl, not yet taught by religious passion to know the noble woman with all that is serene, oracular and beautiful in her soul. Let him be great, and love shall follow him. Nothing is more deeply punished than the neglect of the affinities by which alone society should be formed, and the insane levity of choosing associates by others' eyes.

He may set his own rate. It is a maxim worthy of all acceptation that a man may have that allowance he takes. Take the place and attitude which belong to you, and all men acquiesce. The world must be just.

Emerson

It leaves every man, with profound unconcern, to set his own rate. Hero or driveller, it meddles not in the matter. It will certainly accept your own measure of your doing and being, whether you sneak about and deny your own name, or whether you see your work produced to the concave sphere of the heavens, one with the revolution of the stars.

The same reality pervades all teaching. The man may teach by doing, and not otherwise. If he can communicate himself he can teach, but not by words. He teaches who gives, and he learns who receives. There is no teaching until the pupil is brought into the same state or principle in which you are; a transfusion takes place; he is you and you are he; then is a teaching, and by no unfriendly chance or bad company can he ever quite lose the benefit. But your propositions run out of one ear as they ran in at the other. We see it advertised that Mr. Grand will deliver an oration on the Fourth of July, and Mr. Hand before the Mechanics' Association, and we do not go thither, because we know that these gentlemen will not communicate their own character and experience to the company. If we had reason to expect such a confidence we should go through all inconvenience and opposition. The sick would be carried in litters. But a public oration is an escapade, a non-committal, an

Spiritual Laws

apology, a gag, and not a communication, not a speech, not a man.

A like Nemesis presides over all intellectual works. We have yet to learn that the thing uttered in words is not therefore affirmed. It must affirm itself, or no forms of logic or of oath can give it evidence. The sentence must also contain its own apology for being spoken.

The effect of any writing on the public mind is mathematically measurable by its depth of thought. How much water does it draw? If it awaken you to think, if it lift you from your feet with the great voice of eloquence, then the effect is to be wide, slow, permanent, over the minds of men; if the pages instruct you not, they will die like flies in the hour. The way to speak and write what shall not go out of fashion is to speak and write sincerely. The argument which has not power to reach my own practice, I may well doubt will fail to reach yours. But take Sidney's maxim:—"Look in thy heart, and write." He that writes to himself writes to an eternal public. That statement only is fit to be made public which you have come at in attempting to satisfy your own curiosity. The writer who takes his subject from his ear and not from his heart, should know that he has lost as much as he seems to have gained, and when the empty book has gathered all its praise, and half the

Emerson

people say, "What poetry! what genius!" it still needs fuel to make fire. That only profits which is profitable. Life alone can impart life; and though we should burst we can only be valued as we make ourselves valuable. There is no luck in literary reputation. They who make up the final verdict upon every book are not the partial and noisy readers of the hour when it appears, but a court as of angels, a public not to be bribed, not to be entreated and not to be overawed, decides upon every man's title to fame. Only those books come down which deserve to last. Gilt edges, vellum and morocco, and presentation-copies to all the libraries will not preserve a book in circulation beyond its intrinsic date. It must go with all Walpole's Noble and Royal Authors to its fate. Blackmore, Kotzebue, or Pollok may endure for a night, but Moses and Homer stand forever. There are not in the world at any one time more than a dozen persons who read and understand Plato,—never enough to pay for an edition of his works; yet to every generation these come duly down, for the sake of those few persons, as if God brought them in his hand. "No book," said Bentley, "was ever written down by any but itself." The permanence of all books is fixed by no effort, friendly or hostile, but by their own specific gravity, or the intrinsic importance of their contents to the

Spiritual Laws

constant mind of man. "Do not trouble yourself too much about the light on your statue," said Michael Angelo to the young sculptor; "the light of the public square will test its value."

In like manner the effect of every action is measured by the depth of the sentiment from which it proceeds. The great man knew not that he was great. It took a century or two for that fact to appear. What he did, he did because he must; it was the most natural thing in the world, and grew out of the circumstances of the moment. But now, everything he did, even to the lifting of his finger or the eating of bread, looks large, all-related, and is called an institution.

These are the demonstrations in a few particulars of the genius of nature; they show the direction of the stream. But the stream is blood; every drop is alive. Truth has not single victories; all things are its organs,—not only dust and stones, but errors and lies. The laws of disease, physicians say, are as beautiful as the laws of health. Our philosophy is affirmative and readily accepts the testimony of negative facts, as every shadow points to the sun. By a divine necessity every fact in nature is constrained to offer its testimony.

Human character evermore publishes itself. The most fugitive deed and word, the mere air of doing a thing, the intimated purpose,

Emerson

expresses character. If you act you show character; if you sit still, if you sleep, you show it. You think because you have spoken nothing when others spoke, and have given no opinion on the times, on the church, on slavery, on marriage, on socialism, on secret societies, on the college, on parties and persons, that your verdict is still expected with curiosity as a reserved wisdom. Far otherwise; your silence answers very loud. You have no oracle to utter, and your fellow-men have learned that you cannot help them; for oracles speak. Doth not Wisdom cry and Understanding put forth her voice?

Dreadful limits are set in nature to the powers of dissimulation. Truth tyrannizes over the unwilling members of the body. Faces never lie, it is said. No man need be deceived who will study the changes of expression. When a man speaks the truth in the spirit of truth, his eye is as clear as the heavens. When he has base ends and speaks falsely, the eye is muddy and sometimes asquint.

I have heard an experienced counsellor say that he never feared the effect upon a jury of a lawyer who does not believe in his heart that his client ought to have a verdict. If he does not believe it his unbelief will appear to the jury, despite all his protestations, and will become their unbelief. This is that law whereby a work of art, of whatever kind,

Spiritual Laws

sets us in the same state of mind wherein the artist was when he made it. That which we do not believe we cannot adequately say, though we may repeat the words never so often. It was this conviction which Swedenborg expressed when he described a group of persons in the spiritual world endeavoring in vain to articulate a proposition which they did not believe; but they could not, though they twisted and folded their lips even to indignation.

A man passes for that he is worth. Very idle is all curiosity concerning other people's estimate of us, and all fear of remaining unknown is not less so. If a man know that he can do anything,—that he can do it better than any one else,—he has a pledge of the acknowledgment of that fact by all persons. The world is full of judgment-days, and into every assembly that a man enters, in every action he attempts, he is gauged and stamped. In every troop of boys that whoop and run in each yard and square, a new-comer is as well and accurately weighed in the course of a few days and stamped with his right number, as if he had undergone a formal trial of his strength, speed and temper. A stranger comes from a distant school with better dress, with trinkets in his pockets, with airs and pretensions; an older boy says to himself, "It's of no use; we shall find him out to-morrow." "What has he done?"

Emerson

is the divine question which searches men and transpierces every false reputation. A fop may sit in any chair of the world nor be distinguished for his hour from Homer and Washington; but there need never be any doubt concerning the respective ability of human beings. Pretension may sit still, but cannot act. Pretension never feigned an act of real greatness. Pretension never wrote an Iliad, nor drove back Xerxes, nor christianized the world, nor abolished slavery.

As much virtue as there is, so much appears; as much goodness as there is, so much reverence it commands. All the devils respect virtue. The high, the generous, the self-devoted sect will always instruct and command mankind. Never was a sincere word utterly lost. Never a magnanimity fell to the ground, but there is some heart to greet and accept it unexpectedly. A man passes for that he is worth. What he is engraves itself on his face, on his form, on his fortunes, in letters of light. Concealment avails him nothing, boasting nothing. There is confession in the glances of our eyes, in our smiles, in salutations, and the grasp of hands. His sin bedaubs him, mars all his good impression. Men know not why they do not trust him, but they do not trust him. His vice glasses his eye, cuts lines of mean expression in his cheek, pinches the nose, sets the mark of the beast on the back of the

Spiritual Laws

head, and writes O fool! fool! on the forehead of a king.

If you would not be known to do any thing, never do it. A man may play the fool in the drifts of a desert, but every grain of sand shall seem to see. He may be a solitary eater, but he cannot keep his foolish counsel. A broken complexion, a swinish look, ungenerous acts and the want of due knowledge,—all blab. Can a cook, a Chiffinch, an Iachimo be mistaken for Zeno or Paul? Confucius exclaimed,—“How can a man be concealed? How can a man be concealed?”

On the other hand, the hero fears not that if he withhold the avowal of a just and brave act it will go unwitnessed and unloved. One knows it,—himself,—and is pledged by it to sweetness of peace and to nobleness of aim which will prove in the end a better proclamation of it than the relating of the incident. Virtue is the adherence in action to the nature of things, and the nature of things makes it prevalent. It consists in a perpetual substitution of being for seeming, and with sublime propriety God is described as saying, I AM.

The lessons which these observations convey is, Be, and not seem. Let us acquiesce. Let us take our bloated nothingness out of the path of the divine circuits. Let us unlearn our wisdom of the world. Let us lie

Emerson

low in the Lord's power and learn that truth alone makes rich and great.

If you visit your friend, why need you apologize for not having visited him, and waste his time and deface your own act? Visit him now. Let him feel that the highest love has come to see him, in thee its lowest organ. Or why need you torment yourself and friend by secret self-reproaches that you have not assisted him or complimented him with gifts and salutations heretofore? Be a gift and a benediction. Shine with real light and not with the borrowed reflection of gifts. Common men are apologies for men; they bow the head, excuse themselves with prolix reasons, and accumulate appearances because the substance is not.

We are full of these superstitions of sense, the worship of magnitude. We call the poet inactive, because he is not a president, a merchant or a porter. We adore an institution, and do not see that it is founded on a thought which we have. But real action is in silent moments. The epochs of our life are not in the visible facts of our choice of a calling, our marriage, our acquisition of an office, and the like, but in a silent thought by the wayside as we walk; in a thought which revises our entire manner of life and says,—‘Thus hast thou done, but it were better thus.’ And all our after years, like menials, serve and wait on this, and accord-

Spiritual Laws

ing to their ability execute its will. This revisal or correction is a constant force, which, as a tendency, reaches through our lifetime. The object of the man, the aim of these moments, is to make daylight shine through him, to suffer the law to traverse his whole being without obstruction, so that on what point soever of his doing your eye falls it shall report truly of his character, whether it be his diet, his house, his religious forms, his society, his mirth, his vote, his opposition. Now he is not homogeneous, but heterogeneous, and the ray does not traverse; there are no thorough lights, but the eye of the beholder is puzzled, detecting many unlike tendencies and a life not yet at one.

Why should we make it a point with our false modesty to disparage that man we are and that form of being assigned to us? A good man is contented. I love and honor Epaminondas, but I do not wish to be Epaminondas. I hold it more just to love the world of this hour than the world of his hour. Nor can you, if I am true, excite me to the least uneasiness by saying, "He acted and thou sittest still." I see action to be good, when the need is, and sitting still to be also good. Epaminondas, if he was the man I take him for, would have sat still with joy and peace, if his lot had been mine. Heaven is large, and affords space for all

Emerson

modes of love and fortitude. Why should we be busybodies and superserviceable? Action and inaction are alike to the true. One piece of the tree is cut for a weathercock and one for the sleeper of a bridge; the virtue of the wood is apparent in both.

I desire not to disgrace the soul. The fact that I am here certainly shows me that the soul had need of an organ here. Shall I not assume the post? Shall I skulk and dodge and duck with my unseasonable apologies and vain modesty and imagine my being here impertinent? less pertinent than Epaminondas or Homer being there? and that the soul did not know its own needs? Besides, without any reasoning on the matter, I have no discontent. The good soul nourishes me and unlocks new magazines of power and enjoyment to me every day. I will not meanly decline the immensity of good, because I have heard that it has come to others in another shape.

Besides, why should we be cowed by the name of Action? 'Tis a trick of the senses,—no more. We know that the ancestor of every action is a thought. The poor mind does not seem to itself to be anything unless it have an outside badge,—some Gentoo diet, or Quaker coat, or Calvinistic prayer-meeting, or philanthropic society, or a great donation or a high office, or, any how, some wild contrasting action to testify that it is

Spiritual Laws

somewhat. The rich mind lies in the sun and sleeps, and is Nature. To think is to act.

Let us, if we must have great actions, make our own so. All action is of an infinite elasticity, and the least admits of being inflated with the celestial air until it eclipses the sun and moon. Let us seek *one* peace by fidelity. Let me heed my duties. Why need I go gadding into the scenes and philosophy of Greek and Italian history before I have justified myself to my benefactors? How dare I read Washington's campaigns when I have not answered the letters of my own correspondents? Is not that a just objection to much of our reading? It is a pusillanimous desertion of our work to gaze after our neighbors. It is peeping. Byron says of Jack Bunting,—

“He knew not what to say, and so he swore.”

I may say it of our preposterous use of books,—He knew not what to do, and so *he read*. I can think of nothing to fill my time with, and I find the Life of Brant. It is a very extravagant compliment to pay to Brant, or to General Schuyler, or to General Washington. My time should be as good as their time,—my facts, my net of relations, as good as theirs, or either of theirs. Rather let me do my work so well that other idlers if they choose may compare my texture with

Emerson

the texture of these and find it identical with the best.

This over-estimate of the possibilities of Paul and Pericles, this under-estimate of our own, comes from a neglect of the fact of an identical nature. Bonaparte knew but one merit, and rewarded in one and the same way the good soldier, the good astronomer, the good poet, the good player. The poet uses the names of Cæsar, of Tamerlane, of Bonduca, of Belisarius; the painter uses the conventional story of the Virgin Mary, of Paul, of Peter. He does not therefore defer to the nature of these accidental men, of these stock heroes. If the poet write a true drama, then he is Cæsar, and not the player of Cæsar; then the selfsame strain of thought, emotion as pure, wit as subtle, motions as swift, mounting, extravagant, and a heart as great, self-sufficing, dauntless, which on the waves of its love and hope can uplift all that is reckoned solid and precious in the world,—palaces, gardens, money, navies, kingdoms,—marking its own incomparable worth by the slight it casts on these gauds of men;—these all are his, and by the power of these he rouses the nations. Let a man believe in God, and not in names and places and persons. Let the great soul incarnated in some woman's form, poor and sad and single, in some Dolly or Joan, go out to service and sweep chambers and scour

Spiritual Laws

floors, and its effulgent daybeams cannot be muffled or hid, but to sweep and scour will instantly appear supreme and beautiful actions, the top and radiance of human life, and all people will get mops and brooms; until, lo! suddenly the great soul has enshrined itself in some other form and done some other deed, and that is now the flower and head of all living nature.

We are the photometers, we the irritable gold-leaf and tinfoil that measure the accumulations of the subtle element. We know the authentic effects of the true fire through every one of its million disguises.

The American Scholar

THE AMERICAN SCHOLAR.

AN ORATION DELIVERED BEFORE THE PHI BETA
KAPPA SOCIETY, AT CAMBRIDGE, AUGUST 31,
1837.

MR. PRESIDENT AND GENTLEMEN:—I greet you on the 'recommencement of our literary year. Our anniversary is one of hope, and, perhaps, not enough of labor. We do not meet for games of strength or skill, for the recitation of histories, tragedies, and odes, like the ancient Greeks; for parliaments of love and poesy, like the Troubadours; nor for the advancement of science, like our contemporaries in the British and European capitals. Thus far, our holiday has been simply a friendly sign of the survival of the love of letters amongst a people too busy to give to letters any more. As such it is precious as the sign of an indestructible instinct. Perhaps the time is already come when it ought to be, and will be, something else; when the sluggard intellect of this continent will look from under its iron lids and fill the postponed expectation of the world with something better than the exertions of mechanical skill. Our day of dependence, our long apprenticeship to the learning of other lands, draws to

Emerson

a close. The millions that around us are rushing into life, cannot always be fed on the sere remains of foreign harvests. Events, actions arise, that must be sung, that will sing themselves. Who can doubt that poetry will revive and lead in a new age, as the star in the constellation Harp, which now flames in our zenith, astronomers announce, shall one day be the pole-star for a thousand years?

In this hope I accept the topic which not only usage but the nature of our association seem to prescribe to this day,—the American Scholar. Year by year we come up hither to read one more chapter of his biography. Let us inquire what light new days and events have thrown on his character and his hopes.

It is one of those fables which out of an unknown antiquity convey an unlooked-for wisdom, that the gods, in the beginning, divided Man into men, that he might be more helpful to himself; just as the hand was divided into fingers, the better to answer its end.

The old fable covers a doctrine ever new and sublime; that there is One Man,—present to all particular men only partially, or through one faculty; and that you must take the whole society to find the whole man. Man is not a farmer, or a professor, or an engineer, but he is all. Man is priest, and scholar, and statesman, and producer, and

The American Scholar

soldier. In the *divided* or social state these functions are parcelled out to individuals, each of whom aims to do his stint of the joint work, whilst each other performs his. The fable implies that the individual, to possess himself, must sometimes return from his own labor to embrace all the other laborers. But, unfortunately, this original unit, this fountain of power, has been so distributed to multitudes, has been so minutely subdivided and peddled out, that it is spilled into drops, and cannot be gathered. The state of society is one in which the members have suffered amputation from the trunk, and strut about so many walking monsters,—a good finger, a neck, a stomach, an elbow, but never a man.

Man is thus metamorphosed into a thing, into many things. The planter, who is Man sent out into the field to gather food, is seldom cheered by any idea of the true dignity of his ministry. He sees his bushel and his cart, and nothing beyond, and sinks into the farmer, instead of Man on the farm. The tradesman scarcely ever gives an ideal worth to his work, but is ridden by the routine of his craft, and the soul is subject to dollars. The priest becomes a form; the attorney a statute-book; the mechanic a machine; the sailor a rope of the ship.

In this distribution of functions the scholar is the delegated intellect. In the right state

Emerson

he is *Man Thinking*. In the degenerate state, when the victim of society, he tends to become a mere thinker, or still worse, the parrot of other men's thinking.

In this view of him, as Man Thinking, the theory of his office is contained. Him Nature solicits with all her placid, all her monitory pictures; him the past instructs; him the future invites. Is not indeed every man a student, and do not all things exist for the student's behoof? And, finally, is not the true scholar the only true master? But the old oracle said, "All things have two handles: beware of the wrong one." In life, too often, the scholar errs with mankind and forfeits his privilege. Let us see him in his school, and consider him in reference to the main influences he receives.

I. The first in time and the first in importance of the influences upon the mind is that of nature. Every day, the sun; and, after sunset, Night and her stars. Ever the winds blow; ever the grass grows. Every day, men and women, conversing, beholding and beholden. The scholar is he of all men whom this spectacle most engages. He must settle its value in his mind. What is nature to him? There is never a beginning, there is never an end, to the inexplicable continuity of this web of God, but always circular power returning into itself. Therein it re-

The American Scholar

seembles his own spirit, whose beginning, whose ending, he never can find,—so entire, so boundless. Far too as her splendors shine, system on system shooting like rays, upward, downward, without centre, without circumference,—in the mass and in the particle, Nature hastens to render account of herself to the mind. Classification begins. To the young mind everything is individual, stands by itself. By and by, it finds how to join two things and see in them one nature; then three, then three thousand; and so, tyrannized over by its own unifying instinct, it goes on tying things together, diminishing anomalies, discovering roots running under ground whereby contrary and remote things cohere and flower out from one stem. It presently learns that since the dawn of history there has been a constant accumulation and classifying of facts. But what is classification but the perceiving that these objects are not chaotic, and are not foreign, but have a law which is also a law of the human mind? The astronomer discovers that geometry, a pure abstraction of the human mind, is the measure of planetary motion. The chemist finds proportions and intelligible method throughout matter; and science is nothing but the finding of analogy, identity, in the most remote parts. The ambitious soul sits down before each refractory fact; one after another reduces all strange

Emerson

constitutions, all new powers, to their class and their law, and goes on forever to animate the last fibre of organization, the outskirts of nature, by insight.

Thus to him, to this school-boy under the bending dome of day, is suggested that he and it proceed from one root; one is leaf and one is flower; relation, sympathy, stirring in every vein. And what is that root? Is not that the soul of his soul? A thought too bold; a dream too wild. Yet when this spiritual light shall have revealed the law of more earthly natures,—when he has learned to worship the soul, and to see that the natural philosophy that now is, is only the first gropings of its gigantic hand, he shall look forward to an ever-expanding knowledge as to a becoming creator. He shall see that nature is the opposite of the soul, answering to it part for part. One is seal and one is print. Its beauty is the beauty of his own mind. Its laws are the laws of his own mind. Nature then becomes to him the measure of his attainments. So much of nature as he is ignorant of, so much of his own mind does he not yet possess. And, in fine, the ancient precept, "Know thyself," and the modern precept, "Study nature," become at last one maxim.

II. The next great influence into the spirit of the scholar is the mind of the past,—in whatever form, whether of literature, of

The American Scholar

art, of institutions, that mind is inscribed. Books are the best type of the influence of the past, and perhaps we shall get at the truth,—learn the amount of this influence more conveniently,—by considering their value alone.

The theory of books is noble. The scholar of the first age received into him the world around; brooded thereon; gave it the new arrangement of his own mind, and uttered it again. It came into him life; it went out from him truth. It came to him short-lived actions; it went out from him immortal thoughts. It came to him business; it went from him poetry. It was dead fact; now, it is quick thought. It can stand, and it can go. It now endures, it now flies, it now inspires. Precisely in proportion to the depth of mind from which it issued, so high does it soar, so long does it sing.

Or, I might say, it depends on how far the process had gone, of transmuting life into truth. In proportion to the completeness of the distillation, so will the purity and imperishableness of the product be. But none is quite perfect. As no air-pump can by any means make a perfect vacuum, so neither can any artist entirely exclude the conventional, the local, the perishable from his book, or write a book of pure thought, that shall be as efficient, in all respects, to a remote posterity, as to contemporaries, or rather to the

Emerson

second age. Each age, it is found, must write its own books; or rather, each generation for the next succeeding. The books of an older period will not fit this.

Yet hence arises a grave mischief. The sacredness which attaches to the act of creation, the act of thought, is transferred to the record. The poet chanting was felt to be a divine man: henceforth the chant is divine also. The writer was a just and wise spirit; henceforward it is settled the book is perfect; as love of the hero corrupts into worship of his statue. Instantly the book becomes noxious: the guide is a tyrant. The sluggish and perverted mind of the multitude, slow to open to the incursions of Reason, having once so opened, having once received this book, stands upon it, and makes an outcry if it is disparaged. Colleges are built on it. Books are written on it by thinkers, not by Man Thinking; by men of talent, that is, who start wrong, who set out from accepted dogmas, not from their own sight of principles. Meek young men grow up in libraries, believing it their duty to accept the views which Cicero, which Locke, which Bacon, have given; forgetful that Cicero, Locke, and Bacon were only young men in libraries when they wrote these books.

Hence, instead of Man Thinking, we have the bookworm. Hence the book-learned class, who value books, as such; not as re-

The American Scholar

lated to nature and the human constitution, but as making a sort of Third Estate with the world and the soul. Hence the restorers of readings, the emendators, the bibliomaniacs of all degrees.

Books are the best of things, well used; abused, amongst the worst. What is the right use? What is the one end which all means go to effect? They are for nothing but to inspire. I had better never see a book than to be warped by its attraction clean out of my own orbit, and made a satellite instead of a system. The one thing in the world, of value, is the active soul. This every man is entitled to; this every man contains within him, although in almost all men obstructed, and as yet unborn. The soul active sees absolute truth and utters truth, or creates. In this action it is genius; not the privilege of here and there a favorite, but the sound estate of every man. In its essence it is progressive. The book, the college, the school of art, the institution of any kind, stop with some past utterance of genius. This is good, say they,—let us hold by this. They pin me down. They look backward and not forward. But genius looks forward: the eyes of man are set in his forehead, not in his hindhead: man hopes: genius creates. Whatever talents may be, if the man create not, the pure efflux of the Deity is not his;—cinders and smoke there may be, but not yet

Emerson

flame. There are creative manners, there are creative actions, and creative words; manners, actions, words, that is, indicative of no custom or authority, but springing spontaneous from the mind's own sense of good and fair.

On the other part, instead of being its own seer, let it receive from another mind its truth, though it were in torrents of light, without periods of solitude, inquest, and self-recovery, and a fatal disservice is done. Genius is always sufficiently the enemy of genius by over-influence. The literature of every nation bears me witness. The English dramatic poets have Shakspearized now for two hundred years.

Undoubtedly there is a right way of reading, so it be sternly subordinated. Man Thinking must not be subdued by his instruments. Books are for the scholar's idle times. When he can read God directly, the hour is too precious to be wasted in other men's transcripts of their readings. But when the intervals of darkness come, as come they must,—when the sun is hid and the stars withdraw their shining,—we repair to the lamps which were kindled by their ray, to guide our steps to the East again, where the dawn is. We hear, that we may speak. The Arabian proverb says, "A fig tree, looking on a fig tree, becometh fruitful."

It is remarkable, the character of the

The American Scholar

pleasure we derive from the best books. They impress us with the conviction that one nature wrote and the same reads. We read the verses of one of the great English poets, of Chaucer, of Marvell, of Dryden, with the most modern joy,—with a pleasure, I mean, which is in great part caused by the abstraction of all *time* from their verses. There is some awe mixed with the joy of our surprise, when this poet, who lived in some past world, two or three hundred years ago, says that which lies close to my own soul, that which I also had wellnigh thought and said. But for the evidence thence afforded to the philosophical doctrine of the identity of all minds, we should suppose some preëstablished harmony, some foresight of souls that were to be, and some preparation of stores for their future wants, like the fact observed in insects, who lay up food before death for the young grub they shall never see.

I would not be hurried by any love of system, by any exaggeration of instincts, to underrate the Book. We all know, that as the human body can be nourished on any food, though it were boiled grass and the broth of shoes, so the human mind can be fed by any knowledge. And great and heroic men have existed who had almost no other information than by the printed page. I only would say that it needs a strong head to bear that diet. One must be an inventor

Emerson

to read well. As the proverb says, "He that would bring home the wealth of the Indies, must carry out the wealth of the Indies." There is then creative reading as well as creative writing. When the mind is braced by labor and invention, the page of whatever book we read becomes luminous with manifold allusion. Every sentence is doubly significant, and the sense of our author is as broad as the world. We then see, what is always true, that as the seer's hour of vision is short and rare among heavy days and months, so is its record, perchance, the least part of his volume. The discerning will read, in his Plato or Shakspeare, only that least part,—only the authentic utterances of the oracle;—all the rest he rejects, were it never so many times Plato's and Shakspeare's.

Of course there is a portion of reading quite indispensable to a wise man. History and exact science he must learn by laborious reading. Colleges, in like manner, have their indispensable office,—to teach elements. But they can only highly serve us when they aim not to drill, but to create; when they gather from far every ray of various genius to their hospitable halls, and by the concentrated fires, set the hearts of their youth on flame. Thought and knowledge are natures in which apparatus and pretension avail nothing. Gowns and pecuniary foundations, though of towns of gold, can never countervail the

The American Scholar

least sentence or syllable of wit. Forget this, and our American colleges will recede in their public importance, whilst they grow richer every year.

III. There goes in the world a notion that the scholar should be a recluse, a valetudinarian,—as unfit for any handiwork or public labor as a penknife for an axe. The so-called “practical men” sneer at speculative men, as if, because they speculate or see, they could do nothing. I have heard it said that the clergy,—who are always, more universally than any other class, the scholars of their day,—are addressed as women; that the rough, spontaneous conversation of men they do not hear, but only a mincing and diluted speech. They are often virtually disfranchised; and indeed there are advocates for their celibacy. As far as this is true of the studious classes, it is not just and wise. Action is with the scholar subordinate, but it is essential. Without it he is not yet man. Without it thought can never ripen into truth. Whilst the world hangs before the eye as a cloud of beauty, we cannot even see its beauty. Inaction is cowardice, but there can be no scholar without the heroic mind. The preamble of thought, the transition through which it passes from the unconscious to the conscious, is action. Only so much do I know, as I have lived. Instantly we know

Emerson

whose words are loaded with life, and whose not.

The world,—this shadow of the soul, or *other me*, lies wide around. Its attractions are the keys which unlock my thoughts and make me acquainted with myself. I run eagerly into this resounding tumult. I grasp the hands of those next me, and take my place in the ring to suffer and to work, taught by an instinct that so shall the dumb abyss be vocal with speech. I pierce its order; I dissipate its fear; I dispose of it within the circuit of my expanding life. So much only of life as I know by experience, so much of the wilderness have I vanquished and planted, or so far have I extended my being, my dominion. I do not see how any man can afford, for the sake of his nerves and his nap, to spare any action in which he can partake. It is pearls and rubies to his discourse. Drudgery, calamity, exasperation, want, are instructors in eloquence and wisdom. The true scholar grudges every opportunity of action past by, as a loss of power.

It is the raw material out of which the intellect moulds her splendid products. A strange process too, this by which experience is converted into thought, as a mulberry leaf is converted into satin. The manufacture goes forward at all hours.

The actions and events of our childhood and youth are now matters of calmest ob-

The American Scholar

servation. They lie like fair pictures in the air. Not so with our recent actions,—with the business which we now have in hand. On this we are quite unable to speculate. Our affections as yet circulate through it. We no more feel or know it than we feel the feet, or the hand, or the brain of our body. The new deed is yet a part of life,—remains for a time immersed in our unconscious life. In some contemplative hour it detaches itself from the life like a ripe fruit, to become a thought of the mind. Instantly it is raised, transfigured; the corruptible has put on incorruption. Henceforth it is an object of beauty, however base its origin and neighborhood. Observe too the impossibility of antedating this act. In its grub state, it cannot fly, it cannot shine, it is a dull grub. But suddenly, without observation, the self-same thing unfurls beautiful wings, and is an angel of wisdom. So is there no fact, no event, in our private history, which shall not, sooner or later, lose its adhesive, inert form, and astonish us by soaring from our body into the empyrean. Cradle and infancy, school and playground, the fear of boys, and dogs, and ferules, the love of little maids and berries, and many another fact that once filled the whole sky, are gone already; friend and relative, profession and party, town and country, nation and world, must also soar and sing.

Emerson

Of course, he who has put forth his total strength in fit actions has the richest return of wisdom. I will not shut myself out of this globe of action, and transplant an oak into a flower-pot, there to hunger and pine; nor trust the revenue of some single faculty, and exhaust one vein of thought, much like those Savoyards, who, getting their livelihood by carvingshepherds, shepherdesses, and smoking Dutchmen, for all Europe, went out one day to the mountain to find stock, and discovered that they had whittled up the last of their pine-trees. Authors we have, in numbers, who have written out their vein, and who, moved by a commendable prudence, sail for Greece or Palestine, follow the trapper into the prairie, or ramble round Algiers, to replenish their merchantable stock.

If it were only for a vocabulary, the scholar would be covetous of action. Life is our dictionary. Years are well spent in country labors; in town; in the insight into trades and manufactures; in frank intercourse with many men and women; in science; in art; to the one end of mastering in all their facts a language by which to illustrate and embody our perceptions. I learn immediately from any speaker how much he has already lived, through the poverty or the splendor of his speech. Life lies behind us as the quarry from whence we get tiles and copestones for

The American Scholar

the masonry of to-day. This is the way to learn grammar. Colleges and books only copy the language which the field and the work-yard made.

But the final value of action, like that of books, and better than books, is that it is a resource. That great principle of Undulation in nature, that shows itself in the inspiring and expiring of the breath; in desire and satiety; in the ebb and flow of the sea; in day and night; in heat and cold; and, as yet more deeply ingrained in every atom and every fluid, is known to us under the name of Polarity,—these “fits of easy transmission and reflection,” as Newton called them,—are the law of nature because they are the law of spirit.

The mind now thinks, now acts, and each fit reproduces the other. When the artist has exhausted his materials, when the fancy no longer paints, when thoughts are no longer apprehended and books are a weariness,—he has always the resource *to live*. Character is higher than intellect. Thinking is the function. Living is the functionary. The stream retreats to its source. A great soul will be strong to live, as well as strong to think. Does he lack organ or medium to impart his truth? He can still fall back on this elemental force of living them. This is a total act. Thinking is a partial act. Let the grandeur of justice shine in his affairs. Let the beauty

Emerson

of affection cheer his lowly roof. Those "far from fame," who dwell and act with him, will feel the force of his constitution in the doings and passages of the day better than it can be measured by any public and designed display. Time shall teach him that the scholar loses no hour which the man lives. Herein he unfolds the sacred germ of his instinct, screened from influence. What is lost in seemliness is gained in strength. Not out of those on whom systems of education have exhausted their culture, comes the helpful giant to destroy the old or to build the new, but out of unhandselled savage nature; out of terrible Druids and Berserkers come at last Alfred and Shakspeare.

I hear therefore with joy whatever is beginning to be said of the dignity and necessity of labor to every citizen. There is virtue yet in the hoe and the spade, for learned as well as for unlearned hands. And labor is everywhere welcome; always we are invited to work; only be this limitation observed, that a man shall not for the sake of wider activity sacrifice any opinion to the popular judgments and modes of action.

I have now spoken of the education of the scholar by nature, by books, and by action. It remains to say somewhat of his duties.

They are such as become Man Thinking. They may all be comprised in self-trust. The

The American Scholar

office of the scholar is to cheer, to raise, and to guide men by showing them facts amidst appearances. He plies the slow, unhonored, and unpaid task of observation. Flamsteed and Herschel, in their glazed observatories, may catalogue the stars with the praise of all men, and the results being splendid and useful, honor is sure. But he, in his private observatory, cataloguing obscure and nebulous stars of the human mind, which as yet no man has thought of as such,—watching days and months sometimes for a few facts; correcting still his old records;—must relinquish display and immediate fame. In the long period of his preparation he must betray often an ignorance and shiftlessness in popular arts, incurring the disdain of the able who shoulder him aside. Long he must stammer in his speech; often forego the living for the dead. Worse yet, he must accept,—how often! poverty and solitude. For the ease and pleasure of treading the old road, accepting the fashions, the education, the religion of society, he takes the cross of making his own and, of course, the self-accusation, the faint heart, the frequent uncertainty and loss of time, which are the nettles and tangling vines in the way of the self-relying and self-directed; and the state of virtual hostility in which he seems to stand to society, and especially to educated society. For all this loss and scorn, what offset? He is to

Emerson

find consolation in exercising the highest functions of human nature. He is one who raises himself from private considerations and breathes and lives on public and illustrious thoughts. He is the world's eye. He is the world's heart. He is to resist the vulgar prosperity that retrogrades ever to barbarism, by preserving and communicating heroic sentiments, noble biographies, melodious verse, and the conclusions of history. Whatsoever oracles the human heart, in all emergencies, in all solemn hours, has uttered as its commentary on the world of actions,—these he shall receive and impart. And whatsoever new verdict Reason from her inviolable seat pronounces on the passing men and events of to-day,—this he shall hear and promulgate.

These being his functions, it becomes him to feel all confidence in himself, and to defer never to the popular cry. He and he only knows the world. The world of any moment is the merest appearance. Some great decorum, some fetish of a government, some ephemeral trade, or war, or man, is cried up by half mankind and cried down by the other half, as if all depended on this particular up or down. The odds are that the whole question is not worth the poorest thought which the scholar has lost in listening to the controversy. Let him not quit his belief that a popgun is a popgun, though the ancient and

The American Scholar

honorable of the earth affirm it to be the crack of doom. In silence, in steadiness, in severe abstraction, let him hold by 'himself; add observation to observation, patient of neglect, patient of reproach, and bide his own time,—happy enough if he can satisfy himself alone that this day he has seen something truly. Success treads on every right step. For the instinct is sure, that prompts him to tell his brother what he thinks. He then learns that in going down into the secrets of his own mind he has descended into the secrets of all minds. He learns that he who has mastered any law in his private thoughts, is master to that extent of all men whose language he speaks, and of all into whose language his own can be translated. The poet, in utter solitude remembering his spontaneous thoughts and recording them, is found to have recorded that which men in crowded cities find true for them also. The orator distrusts at first the fitness of his frank confessions, his want of knowledge of the persons he addresses, until he finds that he is the complement of his hearers;—that they drink his words because he fulfils for them their own nature; the deeper he dives into his privatest, secretest presentiment, to his wonder he finds this is the most acceptable, most public, and universally true. The people delight in it; the better part of every man feels, This is my music; this is myself.

Emerson

In self-trust all the virtues are comprehended. Free should the scholar be,—free and brave. Free even to the definition of freedom, “without any hindrance that does not arise out of his own constitution.” Brave; for fear is a thing which a scholar by his very function puts behind him. Fear always springs from ignorance. It is a shame to him if his tranquillity, amid dangerous times, arise from the presumption that like children and women his is a protected class; or if he seek a temporary peace by the diversion of his thoughts from politics or vexed questions, hiding his head like an ostrich in the flowering bushes, peeping into microscopes, and turning rhymes, as a boy whistles to keep his courage up. So is the danger a danger still; so is the fear worse. Manlike let him turn and face it. Let him look into its eye and search its nature, inspect its origin,—see the whelping of this lion,—which lies no great way back; he will then find in himself a perfect comprehension of its nature and extent; he will have made his hands meet on the other side, and can henceforth defy it and pass on superior. The world is his who can see through its pretension. What deafness, what stone-blind custom, what overgrown error you behold is there only by sufferance,—by your sufferance. See it to be a lie, and you have already dealt it its mortal blow.

The American Scholar

Yes, we are the cowed,—we the trustless. It is a mischievous notion that we are come late into nature; that the world was finished a long time ago. As the world was plastic and fluid in the hands of God, so it is ever to so much of his attributes as we bring to it. To ignorance and sin, it is flint. They adapt themselves to it as they may; but in proportion as a man has any thing in him divine, the firmament flows before him and takes his signet and form. Not he is great who can alter matter, but he who can alter my state of mind. They are the kings of the world who give the color of their present thought to all nature and all art, and persuade men by the cheerful serenity of their carrying the matter, that this thing which they do is the apple which the ages have desired to pluck, now at last ripe, and inviting nations to the harvest. The great man makes the great thing. Wherever Macdonald sits, there is the head of the table. Linnæus makes botany the most alluring of studies, and wins it from the farmer and the herb-woman; Davy, chemistry; and Cuvier, fossils. The day is always his who works in it with serenity and great aims. The unstable estimates of men crowd to him whose mind is filled with a truth, as the heaped waves of the Atlantic follow the moon.

For this self-trust, the reason is deeper than can be fathomed,—darker than can be en-

Emerson

lightened. I might not carry with me the feeling of my audience in stating my own belief. But I have already shown the ground of my hope, in adverting to the doctrine that man is one. I believe man has been wronged; he has wronged himself. He has almost lost the light that can lead him back to his prerogatives. Men are become of no account. Men in history, men in the world of to-day, are bugs, are spawn, and are called "the mass" and "the herd." In a century, in a millennium, one or two men; that is to say, one or two approximations to the right state of every man. All the rest behold in the hero or the poet their own green and crude being,—ripened; yes, and are content to be less, so *that* may attain to its full stature. What a testimony, full of grandeur, full of pity, is borne to the demands of his own nature, by the poor clansman, the poor partisan, who rejoices in the glory of his chief. The poor and the low find some amends to their immense moral capacity, for their acquiescence in a political and social inferiority. They are content to be brushed like flies from the path of a great person, so that justice shall be done by him to that common nature which it is the dearest desire of all to see enlarged and glorified. They sun themselves in the great man's light, and feel it to be their own element. They cast the dignity of man from their downtrodden selves upon the

The American Scholar

shoulders of a hero, and will perish to add one drop of blood to make that great heart beat, those giant sinews combat and conquer. He lives for us, and we live in him.

Men such as they are, very naturally seek money or power; and power because it is as good as money,—the “spoils,” so called, “of office.” And why not? for they aspire to the highest, and this, in their sleep-walking, they dream is highest. Wake them and they shall quit the false good and leap to the true, and leave governments to clerks and desks. This revolution is to be wrought by the gradual domestication of the idea of Culture. The main enterprise of the world for splendor, for extent, is the upbuilding of a man. Here are the materials strewn along the ground. The private life of one man shall be a more illustrious monarchy, more formidable to its enemy, more sweet and serene in its influence to its friend, than any kingdom in history. For a man, rightly viewed, comprehendeth the particular natures of all men. Each philosopher, each bard, each actor has only done for me, as by a delegate, what one day I can do for myself. The books which once we valued more than the apple of the eye, we have quite exhausted. What is that but saying that we have come up with the point of view which the universal mind took through the eyes of one scribe; we have been that man, and have passed on. First, one, then

Emerson

another, we drain all cisterns, and waxing greater by all these supplies, we crave a better and more abundant food. The man has never lived that can feed us ever. The human mind cannot be enshrined in a person who shall set a barrier on any one side to this unbounded, unboundable empire. It is one central fire, which, flaming now out of the lips of Etna, lightens the capes of Sicily, and now out of the throat of Vesuvius, illuminates the towers and vineyards of Naples. It is one light which beams out of a thousand stars. It is one soul which animates all men.

But I have dwelt perhaps tediously upon this abstraction of the Scholar. I ought not to delay longer to add what I have to say of nearer reference to the time and to this country.

Historically, there is thought to be a difference in the ideas which predominate over successive epochs, and there are data for marking the genius of the Classic, of the Romantic, and now of the Reflective or Philosophical age. With the views I have intimated of the oneness or the identity of the mind through all individuals, I do not much dwell on these differences. In fact, I believe each individual passes through all three. The boy is a Greek; the youth, romantic; the adult, reflective. I deny not however that a

The American Scholar

revolution in the leading idea may be distinctly enough traced.

Our age is bewailed as the age of Introversion. Must that needs be evil? We, it seems, are critical; we are embarrassed with second thoughts; we cannot enjoy anything for hankering to know whereof the pleasure consists; we are lined with eyes; we see with our feet; the time is infected with Hamlet's unhappiness,—

“Sicklied o’er with the pale cast of thought.”

It is so bad then? Sight is the last thing to be pitied. Would we be blind? Do we fear lest we should outsee nature and God, and drink truth dry? I look upon the discontent of the literary class as a mere announcement of the fact that they find themselves not in the state of mind of their fathers, and regret the coming state as untried; as a boy dreads the water before he has learned that he can swim. If there is any period one would desire to be born in, is it not the age of Revolution; when the old and the new stand side by side and admit of being compared; when the energies of all men are searched by fear and by hope; when the historic glories of the old can be compensated by the rich possibilities of the new era? This time, like all times, is a very good one, if we but know what to do with it.

I read with some joy of the auspicious

Emerson

signs of the coming days, as they glimmer already through poetry and art, through philosophy and science, through church and state.

One of these signs is the fact that the same movement which effected the elevation of what was called the lowest class in the state, assumed in literature a very marked and as benign an aspect. Instead of the sublime and beautiful, the near, the low, the common, was explored and poetized. That which had been negligently trodden under foot by those who were harnessing and provisioning themselves for long journeys into far countries, is suddenly found to be richer than all foreign parts. The literature of the poor, the feelings of the child, the philosophy of the street, the meaning of household life, are the topics of the time. It is a great stride. It is a sign,—is it not? of new vigor when the extremities are made active, when currents of warm life run into the hands and the feet. I ask not for the great, the remote, the romantic; what is doing in Italy or Arabia; what is Greek art, or Provencal minstrelsy; I embrace the common, I explore and sit at the feet of the familiar, the low. Give me insight into to-day, and you may have the antique and future worlds. What would we really know the meaning of? The meal in the firkin; the milk in the pan; the ballad in the street; the news of the boat; the glance of the eye; the form and the gait of

The American Scholar

the body;—show me the ultimate reason of these matters; show me the sublime presence of the highest spiritual cause lurking, as always it does lurk, in these suburbs and extremities of nature; let me see every trifle bristling with the polarity that ranges it instantly on an eternal law; and the shop, the plough, and the ledger referred to the like cause by which light undulates and poets sing;—and the world lies no longer a dull miscellany and lumber-room, but has form and order; there is no trifle, there is no puzzle, but one design unites and animates the farthest pinnacle and the lowest trench.

This idea has inspired the genius of Goldsmith, Burns, Cowper, and, in a newer time, of Goethe, Wordsworth, and Carlyle. This idea they have differently followed and with various success. In contrast with their writing, the style of Pope, of Johnson, of Gibbon, looks cold and pedantic. This writing is blood-warm. Man is surprised to find that things near are not less beautiful and wondrous than things remote. The near explains the far. The drop is a small ocean. A man is related to all nature. This perception of the worth of the vulgar is fruitful in discoveries. Goethe, in this very thing the most modern of the moderns, has shown us, as none ever did, the genius of the ancients.

There is one man of genius who has done much for this philosophy of life, whose liter-

Emerson

ary value has never yet been rightly estimated;—I mean Emanuel Swedenborg. The most imaginative of men, yet writing with the precision of a mathematician, he endeavored to engraft a purely philosophical Ethics on the popular Christianity of his time. Such an attempt of course must have difficulty which no genius could surmount. But he saw and showed the connection between nature and the affections of the soul. He pierced the emblematic or spiritual character of the visible, audible, tangible world. Especially did his shade-loving muse hover over and interpret the lower parts of nature; he showed the mysterious bond that allies moral evil to the foul material forms, and has given in epical parables a theory of insanity, of beasts, of unclean and fearful things.

Another sign of our times, also marked by an analogous political movement, is the new importance given to the single person. Every thing that tends to insulate the individual,—to surround him with barriers of natural respect, so that each man shall feel the world is his, and man shall treat with man as a sovereign state with a sovereign state,—tends to true union as well as greatness. "I learned," said the melancholy Pestalozzi, "that no man in God's wide earth is either willing or able to help any other man." Help must come from the bosom alone. The scholar is that man who must

The American Scholar

take up into himself all the ability of the time, all the contributions of the past, all the hopes of the future. He must be an university of knowledges. If there be one lesson more than another which should pierce his ear, it is, The world is nothing, the man is all; in yourself is the law of all nature, and you know not yet how a globule of sap ascends; in yourself slumbers the whole of Reason; it is for you to know all; it is for you to dare all. Mr. President and Gentlemen, this confidence in the unsearched might of man belongs, by all motives, by all prophecy, by all preparation, to the American Scholar. We have listened too long to the courtly muses of Europe. The spirit of the American freeman is already suspected to be timid, imitative, tame. Public and private avarice make the air we breathe thick and fat. The scholar is decent, indolent, complaisant. See already the tragicconsequence. The mind of this country, taught to aim at low objects, eats upon itself. There is no work for any but the decorous and the complaisant. Young men of the fairest promise, who begin life upon our shores, inflated by the mountain winds, shined upon by all the stars of God, find the earth below not in unison with these, but are hindered from action by the disgust which the principles on which business is managed inspire, and turn drudges, or die of disgust, some of them

Emerson

suicides. What is the remedy? They did not yet see, and thousands of young men as hopeful now crowding to the barriers for the career do not yet see, that if the single man plant himself indomitably on his instincts, and there abide, the huge world will come round to him. Patience—patience; with the shades of all the good and great for company; and for solace the perspective of your own infinite life; and for work the study and the communication of principles, the making those instincts prevalent, the conversion of the world. Is it not the chief disgrace in the world, not to be an unit;—not to be reckoned one character;—not to yield that peculiar fruit which each man was created to bear, but to be reckoned in the gross, in the hundred, or the thousand, of the party, the section, to which we belong; and our opinion predicted geographically, as the north, or the south? Not so, brothers and friends,—please God, ours shall not be so. We will walk on our own feet; we will work with our own hands; we will speak our own minds. The study of letters shall be no longer a name for pity, for doubt, and for sensual indulgence. The dread of man and the love of man shall be a wall of defence and a wreath of joy around all. A nation of men will for the first time exist, because each believes himself inspired by the Divine Soul which also inspires all men.
